Expansion of Hong Kong International Airport into a Three-Runway System

Construction Phase Monthly EM&A
Report No. 78
(For June 2022)

July 2022

This Monthly EM&A Report No. 78 has been reviewed and certified by

the Environmental Team Leader (ETL) in accordance with

Condition 3.5 of Environmental Permit No. EP-489/2014.

Certified by:

A handwritten signature in black ink, appearing to read 'Terence Kong', written in a cursive style.

Attn: Mr. Lawrence Tsui, Principal Manager, Environmental Compliance

14 July 2022

Dear Sir,

Contract No. 3102
3RS Independent Environmental Checker Consultancy Services

Submission of Monthly EM&A Report No. 78 (June 2022)

Reference is made to the Environmental Team's submission of the Monthly EM&A Report No. 78 under Condition 3.5 of the Environmental Permit No. EP-489/2014 certified by the ET Leader on 14 July 2022.

We write to verify the captioned submission in accordance with the requirement stipulated in Condition 3.5 of EP-489/2014.

Should you have any query, please feel free to contact the undersigned at 3922 9376.

Yours faithfully,
AECOM Asia Co. Ltd.

Jackel Law
Independent Environmental Checker

Executive summary

The “Expansion of Hong Kong International Airport into a Three-Runway System” (the Project) serves to meet the future air traffic demands at Hong Kong International Airport (HKIA). On 7 November 2014, the Environmental Impact Assessment (EIA) Report (Register No.: AEIAR-185/2014) for the Project was approved and an Environmental Permit (EP) (Permit No.: EP-489/2014) was issued for the construction and operation of the Project.

Airport Authority Hong Kong (AAHK) commissioned Mott MacDonald Hong Kong Limited (MMHK) to undertake the role of Environmental Team (ET) for carrying out the Environmental Monitoring & Audit (EM&A) works during the construction phase of the Project in accordance with the Updated EM&A Manual (the Manual).

This is the 78th Construction Phase Monthly EM&A Report for the Project which summarises the monitoring results and audit findings of the EM&A programme during the reporting period from 1 to 30 June 2022.

Key Activities in the Reporting Period

The key activities of the Project carried out in the reporting period are located in reclamation areas and existing airport island respectively. Works in the reclamation areas included seawall construction, filling and ground improvement works, together with runway, concourse and associated works. Land-based works on existing airport island involved mainly airfield works, Terminal 2 expansion works, modification and tunnel work for Automated People Mover (APM) and Baggage Handling System (BHS), and preparation work for utilities, with activities include road and drainage works, cable ducting, demolition, piling, and excavation works.

EM&A Activities Conducted in the Reporting Period

The monthly EM&A programme was undertaken in accordance with the Manual of the Project. Summary of the monitoring activities during this reporting period is presented as below:

| Monitoring Activities | Number of Sessions |
|---|---------------------------|
| 1-hour Total Suspended Particulates (TSP) air quality monitoring | 30 |
| Noise monitoring | 16 |
| Water quality monitoring | 13 |
| Vessel line-transect surveys for Chinese White Dolphin (CWD) monitoring | 2 |
| Land-based theodolite tracking survey effort for CWD monitoring | 2 |

Environmental auditing works, including weekly site inspections of construction works conducted by the ET and bi-weekly site inspections conducted by the Independent Environmental Checker (IEC), audit of SkyPier High Speed Ferries (HSF), audit of construction and associated vessels, and audit of implementation of Marine Mammal Watching Plan (MMWP) and Dolphin Exclusion Zone (DEZ) Plan, were conducted in the reporting period. Based on the information including ET’s observations, records of Maritime Surveillance System (MSS), and contractors’ site records, it is noted that environmental pollution control and mitigation measures were properly implemented and construction activities of the Project in the reporting period did not introduce adverse impacts to the sensitive receivers.

Snapshots of EM&A Activities in the Reporting Period

| | | |
|---|--|--|
|  |  |  |
| <p>Impact Air Quality Monitoring conducted by ET at Tin Sum Village House</p> | <p>Checking of Daily Water Quality Monitoring Record for Wastewater Treatment Facility</p> | <p>Automatic Dust Suppression System implemented by Contractor</p> |

Results of Impact Monitoring

The monitoring works for construction dust, construction noise, water quality, construction waste, landscape & visual, and CWD were conducted during the reporting period in accordance with the Manual.

Monitoring results of construction dust, construction noise, construction waste and CWD did not trigger the corresponding Action and Limit Levels in the reporting period.

The water quality monitoring results for all parameters, except dissolved oxygen (DO) and suspended solids (SS), obtained during the reporting period were within the corresponding Action and Limit Levels stipulated in the EM&A programme. Relevant investigation and follow-up actions will be conducted according to the EM&A programme if the corresponding Action and Limit Levels are triggered. For DO and SS, some of the testing results triggered the relevant Action Levels, and corresponding investigations were conducted accordingly. The investigation findings revealed that the cases were not related to the Project. To conclude the construction activities in the reporting period did not introduce adverse impact to all water quality sensitive receivers.

Summary of Upcoming Key Issues

Reclamation Works:

Contract 3206 Main Reclamation Works

- Seawall construction; and
- Backfilling works.

Airfield Works

Contract 3302 Eastern Vehicular Tunnel Advance Works

- Construction of tunnel structure;
- Pipe and drainage diversion works;
- Excavation and lateral support systems installation; and
- Stockpiling.

Contract 3303 Third Runway and Associated Works

- Architectural, Builder's and Finishing works;
- Footing and utilities work;
- Box culvert construction;
- Operation of asphalt plant; and
- Cable laying and ducting works.

Contract 3305 Airfield Ground Lighting System

- Modification works.

Contract 3306 Observation Facility Control System Supporting Interim 2RS and 3RS

- Equipment installation.

Contract 3307 Fire Training Facility

- Architectural, Builder's and Finishing works;
- Drainage and utilities works; and
- Building construction.

Contract 3308 Foreign Object Debris Detection System

- Site acceptance test for foreign object debris detection sensor.

Contract 3310 North Runway Modification Works

- Seawall construction;
- Construction of columns, walls and slabs;
- Installation of pipe piles;
- Land-based ground improvement works; and
- Backfilling works.

Third Runway Concourse:

Contract 3403 New Integrated Airport Centres Building and Civil Works

- Architectural, Builder's Work and Finishing works; and
- Defects and outstanding works.

Contract 3404 Integrated Airport Control System

- System maintenance.

Contract 3405 Third Runway Concourse Foundation and Substructure Works

- Bored piling;
- Structure works;
- Excavation; and
- Road formation.

Contract 3408 Third Runway Concourse and Apron Works

- Reinforced concrete works;
- Site setup works; and
- Excavation.

Terminal 2 Expansion:

Contract 3508 Terminal 2 Expansion Works

- Excavation and footing construction;
- Block wall construction;
- Drainage works;
- Bridge demolition;
- Piling works;
- Backfilling;
- Temporary road construction; and
- Architectural, Builder's Work and Finishing works.

Automated People Mover (APM) and Baggage Handling System (BHS):

Contract 3601 New Automated People Mover System (TRC Line)

- Guidebeam installation.

Contract 3602 Existing APM System Modification Works

- Erection of guide rail; and
- Concrete plinth and stitch construction.

Contract 3603 Baggage Handling System (BHS)

- BHS installation.

Construction Support (Facilities):

Contract 3721 Construction Support Infrastructure Works

- Laying of drainage pipes and water mains;
- Paving works; and
- Road works.

Contract 3723 Construction Support Facilities

- Clearance works; and
- E&M installation.

Airport Support Infrastructure:

Contract 3801 APM and BHS Tunnels on Existing Airport Island

- Excavation;
- Box jacking operation; and
- Backfilling.

Contract 3802 APM and BHS Tunnels and Related Works

- Installation of dewatering well; and
- Excavation works.

Construction Support (Services / Licences):

Contract 3901A Concrete Batching Facility

- Operation of concrete batching plant and material conveyor belt.

Contract 3901B Concrete Batching Facility

- Operation of concrete batching plant.

Summary Table

The following table summarises the key findings of the EM&A programme during the reporting period:

| | Yes | No | Details | Analysis / Recommendation / Remedial Actions |
|--|-----|----|---|--|
| Breach of Limit Level [^] | | √ | No breach of Limit Level was recorded. | Nil |
| Breach of Action Level [^] | | √ | No breach of Action Level was recorded. | Nil |
| Complaint Received | √ | | A complaint regarding dust issue at 3RS construction site was received on 28 June 2022. | The complaint is under investigation. Findings will be reported in the next Monthly EM&A Report. |
| | | | A complaint regarding dust issue at 3RS construction site was received on 28 June 2022. | The complaint is under investigation. Findings will be reported in the next Monthly EM&A Report. |
| | | | A complaint regarding dust issue at 3RS construction site was received on 30 June 2022. | The complaint is under investigation. Findings will be reported in the next Monthly EM&A Report. |
| Notification of any summons and status of prosecutions | | √ | No notification of summons nor prosecution was received. | Nil |
| Change that affect the EM&A | | √ | There was no change to the construction works that may affect the EM&A. | Nil |

Note:

[^] Only triggering of Action or Limit Level found related to Project works is counted as Breach of Action or Limit Level.

1 Introduction

1.1 Background

On 7 November 2014, the Environmental Impact Assessment (EIA) Report (Register No.: AEIAR-185/2014) for the “Expansion of Hong Kong International Airport into a Three-Runway System” (the Project) was approved and an Environmental Permit (EP) (Permit No.: EP-489/2014) was issued for the construction and operation of the Project.

Airport Authority Hong Kong (AAHK) commissioned Mott MacDonald Hong Kong Limited (MMHK) to undertake the role of Environmental Team (ET) for carrying out the Environmental Monitoring & Audit (EM&A) works during the construction phase of the Project in accordance with the Updated EM&A Manual (the Manual) submitted under EP Condition 3.1¹. AECOM Asia Company Limited (AECOM) was employed by AAHK as the Independent Environmental Checker (IEC) for the Project.

The Project covers the expansion of the existing airport into a three-runway system (3RS) with key project components comprising land formation of about 650 ha and all associated facilities and infrastructure including taxiways, aprons, aircraft stands, a passenger concourse, an expanded Terminal 2, all related airside and landside works and associated ancillary and supporting facilities. The submarine aviation fuel pipelines and submarine power cables also require diversion as part of the works.

Construction of the Project is to proceed in the general order of diversion of the submarine aviation fuel pipelines, diversion of the submarine power cables, land formation, and construction of infrastructure, followed by construction of superstructures.

The summary of construction works programme can be referred to **Section 1.4**.

1.2 Scope of this Report

This is the 78th Construction Phase Monthly EM&A Report for the Project which summarises the key findings of the EM&A programme during the reporting period from 1 to 30 June 2022.

1.3 Project Organisation

The Project’s organisation structure presented in Appendix B of the Construction Phase Monthly EM&A Report No.1 remained unchanged during the reporting period. Contact details of the key personnel are presented in **Table 1.1**.

Table 1.1: Contact Information of Key Personnel

1.4 Summary of Construction Works

The key activities of the Project carried out in the reporting period are located in reclamation areas and existing airport island respectively. Works in the reclamation areas included seawall construction, filling and ground improvement works, together with runway, concourse and associated works. Land-based works on existing airport island involved mainly airfield works, Terminal 2 expansion works, modification and tunnel work for Automated People Mover (APM) and Baggage Handling System (BHS), and preparation work for utilities, with activities include road and drainage works, cable ducting, demolition, piling, and excavation works.

The locations of key construction activities are presented in **Figure 1.1**.

1.5 Summary of EM&A Programme Requirements

The status for all environmental aspects are presented in **Table 1.2**. The EM&A requirements remained unchanged during the reporting period. **Figure 1.2** presents the latest layout of enhanced silt curtain deployed.

Table 1.2: Summary of Status of All Environmental Aspects under the Updated EM&A Manual

| Parameters | EM&A Requirements | Status |
|--|---|--|
| Air Quality | | |
| Baseline Monitoring | At least 14 consecutive days before commencement of construction work | The baseline air quality monitoring result was reported in Baseline Monitoring Report and submitted to EPD under EP Condition 3.4. |
| Impact Monitoring | At least 3 times every 6 days | On-going |
| Noise | | |
| Baseline Monitoring | Daily for a period of at least two weeks prior to the commencement of construction works | The baseline noise monitoring result was reported in Baseline Monitoring Report and submitted to EPD under EP Condition 3.4. |
| Impact Monitoring | Weekly | On-going |
| Water Quality | | |
| General Baseline Water Quality Monitoring for reclamation, water jetting and field joint works | Three days per week, at mid-flood and mid-ebb tides, for at least four weeks prior to the commencement of marine works. | The baseline water quality monitoring result was reported in Baseline Water Quality Monitoring Report and submitted to EPD under EP Condition 3.4. |
| General Impact Water Quality Monitoring for reclamation, water jetting and field joint works | Three days per week, at mid-flood and mid-ebb tides. | On-going for reclamation works. General impact water quality monitoring for water jetting works was completed on 23 May 2017. |
| Initial Intensive Deep Cement Mixing (DCM) Water Quality Monitoring | At least four weeks | The Initial Intensive DCM Monitoring Report was submitted and approved by EPD in accordance with the Detailed Plan on DCM. |

| Parameters | EM&A Requirements | Status |
|--|---|--|
| Regular DCM Water Quality Monitoring | Three times per week until completion of DCM works. | Due to the completion of all marine-based DCM works within April 2022, regular DCM monitoring was ceased at all monitoring stations starting from 28 April 2022 and would be resumed if there are marine-based DCM works in the coming future. |
| Sewerage and Sewage Treatment | | |
| Methodology for carrying out annual sewage flow monitoring for concerned gravity sewer | Methodology to be prepared and submitted to EPD one year before the scheduled commencement of operation of the proposed third runway | The proposed methodology of the annual sewage flow monitoring was approved by EPD. The annual flow monitoring has been started since June 2021. |
| Details of the routine H ₂ S monitoring system for the sewerage system of 3RS | Details to be prepared and submitted to EPD at least one year before commencement of the operation of 3RS | The details of the routine H ₂ S monitoring system will be prepared and submitted to EPD at least one year before commencement of operation of 3RS. |
| Waste Management | | |
| Waste Monitoring | At least weekly | On-going |
| Land Contamination | | |
| Supplementary Contamination Assessment Plan (CAP) | At least 3 months before commencement of any soil remediation works. | The Supplementary CAP was submitted and approved by EPD under EP Condition 2.20. |
| Contamination Assessment Report (CAR) for Golf Course | CAR to be submitted for golf course | The CAR for Golf Course was submitted and accepted by EPD. |
| Contamination Assessment Reports (CAR) for Terminal 2 Emergency Power Supply Systems | CAR to be submitted for Terminal 2 Emergency Power Supply Systems | The CARs for Terminal 2 Emergency Power Supply Systems were submitted and accepted by EPD. |
| Terrestrial Ecology | | |
| Pre-construction Egretty Survey Plan | Once per month in the breeding season between April and July, prior to the commencement of HDD drilling works. | The Egretty Survey Plan was submitted and approved by EPD under EP Condition 2.14. |
| Ecological Monitoring | Monthly monitoring during the HDD construction works period from August to March. | The terrestrial ecological monitoring at Sheung Sha Chau was completed in January 2019. |
| Marine Ecology | | |
| Pre-Construction Phase Coral Dive Survey | Prior to marine construction works | The Coral Translocation Plan was submitted and approved by EPD under EP Condition 2.12. |
| Coral Translocation | - | The coral translocation was completed. |
| Post-Translocation Coral Monitoring | As per an enhanced monitoring programme based on the Coral Translocation Plan | The post-translocation monitoring programme according to the Coral Translocation Plan was completed in April 2018. |
| Chinese White Dolphins (CWD) | | |
| Baseline Monitoring | 6 months of baseline surveys before the commencement of land formation related construction works. Vessel line transect surveys: Two full surveys per month; Land-based theodolite tracking surveys: Two days per month at the Sha Chau station and two days per month at the Lung Kwu Chau station; and Passive Acoustic Monitoring (PAM): For the whole duration of baseline period. | Baseline CWD results were reported in the CWD Baseline Monitoring Report and submitted to EPD in accordance with EP Condition 3.4. |
| Impact Monitoring | Vessel line transect surveys: Two full surveys per month; | On-going |

| Parameters | EM&A Requirements | Status |
|---|--|---|
| | Land-based theodolite tracking surveys: One day per month at the Sha Chau station and one day per month at the Lung Kwu Chau station; and PAM: For the whole duration for land formation related construction works. | |
| Landscape & Visual | | |
| Landscape & Visual Plan | At least 3 months before the commencement of construction works on the formed land of the Project. | The Landscape & Visual Plan was submitted and approved by EPD under EP Condition 2.18 |
| Baseline Monitoring | One-off survey within the Project site boundary prior to commencement of any construction works | The baseline landscape & visual monitoring result was reported in Baseline Monitoring Report and submitted to EPD under EP Condition 3.4. |
| Impact Monitoring | Weekly | On-going |
| Environmental Auditing | | |
| Regular site inspection | Weekly | On-going |
| Marine Mammal Watching Plan (MMWP) implementation measures | Monitor and check | On-going |
| Dolphin Exclusion Zone (DEZ) Plan implementation measures | Monitor and check | On-going |
| SkyPier High Speed Ferries (HSF) implementation measures | Monitor and check | On-going |
| Construction and Associated Vessels Implementation measures | Monitor and check | On-going |
| Silt Curtain Deployment Plan implementation measures | Monitor and check | On-going |
| Spill Response Plan implementation measures | Monitor and check | On-going |
| Complaint Hotline and Email channel | Construction phase | On-going |
| Environmental Log Book | Construction phase | On-going |

Taking into account the construction works in this reporting period, impact monitoring of air quality, noise, water quality, waste management, landscape & visual, and CWD were carried out in the reporting period.

The EM&A programme also involved weekly site inspections and related auditing conducted by the ET for checking the implementation of the required environmental mitigation measures recommended in the approved EIA Report. To promote the environmental awareness and enhance the environmental performance of the contractors, regular environmental management meetings were conducted during the reporting period, which are summarised as below:

- One skipper training session provided by ET: 15 June 2022.
- Seventeen environmental management meetings for EM&A review with works contracts: 2, 9, 10, 16, 17, 22, 23, 24, 27, 28 and 29 June 2022.

The EM&A programme has been following the recommendations presented in the approved EIA Report and the Manual. A summary of implementation status of the environmental mitigation measures for the construction phase of the Project during the reporting period is provided in **Appendix A**.

2 Air Quality Monitoring

Air quality monitoring of 1-hour Total Suspended Particulates (TSP) was conducted three times every six days at two representative monitoring stations in the vicinity of air sensitive receivers in Tung Chung and villages in North Lantau in accordance with the Manual. **Table 2.1** describes the details of the monitoring stations. **Figure 2.1** shows the locations of the monitoring stations.

Table 2.1: Locations of Impact Air Quality Monitoring Stations

| Monitoring Station | Location |
|--------------------|--------------------------|
| AR1A | Man Tung Road Park |
| AR2 | Village House at Tin Sum |

2.1 Action and Limit Levels

In accordance with the Manual, baseline air quality monitoring of 1-hour TSP levels at the two air quality monitoring stations were established as presented in the Baseline Monitoring Report. The Action and Limit Levels of the air quality monitoring stipulated in the EM&A programme for triggering the relevant investigation and follow-up procedures under the programme are provided in **Table 2.2**.

Table 2.2: Action and Limit Levels of Air Quality Monitoring

| Monitoring Station | Action Level ($\mu\text{g}/\text{m}^3$) | Limit Level ($\mu\text{g}/\text{m}^3$) |
|--------------------|---|--|
| AR1A | 306 | 500 |
| AR2 | 298 | |

2.2 Monitoring Equipment

Portable direct reading dust meter was used to carry out the air quality monitoring. Details of equipment used in the reporting period are given in **Table 2.3**.

Table 2.3: Air Quality Monitoring Equipment

| Equipment | Brand and Model | Last Calibration Date | Calibration Certificate Provided in |
|--|---------------------------------------|-----------------------|--|
| Portable direct reading dust meter (Laser dust monitor) | SIBATA LD-3B-2 (Serial No. 296098) | 20 Oct 2021 | Monthly EM&A Report No. 70, Appendix E |
| | SIBATA LD-3B-1 (Serial No. 597337) | 11 May 2022 | Monthly EM&A Report No. 77, Appendix D |

2.3 Monitoring Methodology

2.3.1 Measuring Procedure

The measurement procedures involved in the impact air quality monitoring can be summarised as follows:

- a. The portable direct reading dust meter was mounted on a tripod at a height of 1.2m above the ground.
- b. Prior to the measurement, the equipment was set up for 1 minute span check and 6 second background check.

- c. The one hour dust measurement was started. Site conditions and dust sources at the nearby area were recorded on a record sheet.
- d. When the measurement completed, the “Count” reading per hour was recorded for result calculation.

2.3.2 Maintenance and Calibration

The portable direct reading dust meter is calibrated every year against high volume sampler (HVS) to check the validity and accuracy of the results measured by direct reading method. The calibration record of the HVS provided in **Appendix D**, and the calibration certificates of portable direct reading dust meters listed in **Table 2.3** are valid in the reporting period.

2.4 Summary of Monitoring Results

The air quality monitoring schedule involved in the reporting period is provided in **Appendix B**. Monitoring session on 10 June 2022 was rescheduled to 11 June 2022 due to adverse weather.

The air quality monitoring results in the reporting period are summarised in **Table 2.4**. Detailed impact monitoring results are presented in **Appendix C**.

Table 2.4: Summary of Air Quality Monitoring Results

| Monitoring Station | 1-hr TSP Concentration Range ($\mu\text{g}/\text{m}^3$) | Action Level ($\mu\text{g}/\text{m}^3$) | Limit Level ($\mu\text{g}/\text{m}^3$) |
|--------------------|---|---|--|
| AR1A | 19 - 68 | 306 | 500 |
| AR2 | 14 - 82 | 298 | |

The monitoring results were within the corresponding Action and Limit Levels at all monitoring stations in the reporting period.

General meteorological conditions throughout the impact monitoring period were recorded. Wind data including wind speed and wind direction for each monitoring day were collected from the Chek Lap Kok Wind Station.

2.5 Conclusion

No dust emission source was observed at the monitoring stations during the monitoring sessions. As the sensitive receivers were far away from the construction activities, with the implementation of dust control measures, there was no adverse impact at the sensitive receivers attributable to the works of the Project.

3 Noise Monitoring

Noise monitoring in the form of 30-minute measurements of L_{eq} , L_{10} , and L_{90} levels was conducted once per week between 0700 and 1900 on normal weekdays at four representative monitoring stations in the vicinity of noise sensitive receivers in Tung Chung and villages in North Lantau in accordance with the Manual. **Table 3.1** describes the details of the monitoring stations. **Figure 2.1** shows the locations of the monitoring stations.

Table 3.1: Locations of Impact Noise Monitoring Stations

| Monitoring Station | Location | Type of measurement |
|---------------------|--|---------------------|
| NM1A | Man Tung Road Park | Free field |
| NM2 ⁽¹⁾ | Tung Chung West Development | To be determined |
| NM3A ⁽²⁾ | Site Office | Facade |
| NM4 | Ching Chung Hau Po Woon Primary School | Free field |
| NM5 | Village House in Tin Sum | Free field |
| NM6 | House No. 1, Sha Lo Wan | Free field |

Notes:

- (1) As described in Section 4.3.3 of the Manual, noise monitoring at NM2 will only commence after occupation of the future Tung Chung West Development.
- (2) According to Section 4.3.3 of the Manual, the noise monitoring at NM3A was temporarily suspended starting from 1 September 2018 and would be resumed with the completion of the Tung Chung East Development.

3.1 Action and Limit Levels

In accordance with the Manual, baseline noise levels at the noise monitoring stations were established as presented in the Baseline Monitoring Report. The Action and Limit Levels of the noise monitoring stipulated in the EM&A programme for triggering the relevant investigation and follow-up procedures under the programme are provided in **Table 3.2**.

Table 3.2: Action and Limit Levels for Noise Monitoring

| Monitoring Stations | Time Period | Action Level | Limit Level, $L_{eq(30mins)}$ dB(A) |
|-----------------------------------|------------------------------------|---|-------------------------------------|
| NM1A, NM2, NM3A, NM4, NM5 and NM6 | 0700-1900 hours on normal weekdays | When one documented complaint is received from any one of the sensitive receivers | 75dB(A) ⁽¹⁾ |

Note:

- (1) The Limit Level for NM4 is reduced to 70dB(A) for being an educational institution. During school examination period, the Limit Level is further reduced to 65dB(A).

3.2 Monitoring Equipment

Noise monitoring was performed using sound level meter at each designated monitoring station. The sound level meters deployed comply with the International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1) specifications. Acoustic calibrator was used to check the sound level meters by a known sound pressure level for field measurement. Details of equipment used in the reporting period are given in **Table 3.3**.

Table 3.3: Noise Monitoring Equipment

| Equipment | Brand and Model | Last Calibration Date | Calibration Certificate Provided in |
|------------------------------|--|--------------------------|--|
| Integrated Sound Level Meter | Rion NL-52 (Serial No. 00998505) | 22 Mar 2022 | Monthly EM&A Report No. 75, Appendix D |
| | Rion NL-52 (Serial No. 01287679) | 20 Jun 2021 ¹ | Monthly EM&A Report No. 66, Appendix D |
| Acoustic Calibrator | Casella CEL-120/1 (Serial No. 2383737) | 20 Jun 2021 ¹ | Monthly EM&A Report No. 66, Appendix D |
| | Castle GA607 (Serial No. 040162) | 22 Mar 2022 | Monthly EM&A Report No. 75, Appendix D |

Note:

1. The monitoring equipment was not used after the expiration of calibration certificate (i.e. 19 June 2022).

3.3 Monitoring Methodology

3.3.1 Monitoring Procedure

The monitoring procedures involved in the noise monitoring can be summarised as follows:

- The sound level meter was set on a tripod at least a height of 1.2m above the ground for free-field measurements at monitoring stations NM1A, NM4, NM5 and NM6. A correction of +3dB(A) was applied to the free field measurements.
- Façade measurements were made at the monitoring station NM3A.
- Parameters such as frequency weighting, time weighting and measurement time were set.
- Prior to and after each noise measurement, the meter was calibrated using the acoustic calibrator. If the difference in the calibration level before and after measurement was more than 1dB(A), the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
- During the monitoring period, L_{eq} , L_{10} and L_{90} were recorded. In addition, site conditions and noise sources were recorded on a record sheet.
- Noise measurement results, when higher than the baseline monitoring levels, were corrected with reference to the baseline monitoring levels.
- Observations were recorded when high intrusive noise (e.g. dog barking, helicopter noise) was observed during the monitoring.

3.3.2 Maintenance and Calibration

The maintenance and calibration procedures are summarised below:

- The microphone head of the sound level meter was cleaned with soft cloth at regular intervals.
- The meter and calibrator were sent to the supplier or laboratory accredited under Hong Kong Laboratory Accreditation Scheme (HOKLAS) to check and calibrate at yearly intervals.

Calibration certificates of the sound level meters and acoustic calibrators used in the noise monitoring listed in **Table 3.3** are valid in the reporting period.

3.4 Summary of Monitoring Results

The noise monitoring schedule involved in the reporting period is provided in **Appendix B**. Due to Red Rainstorm Warning Signal on 8 June 2022, the monitoring session for NM4 and NM6 was

rescheduled to 10 June 2022 and the monitoring session on 10 June 22 for NM1A and NM5 was rescheduled to 11 June 2022.

The noise monitoring results in the reporting period are summarised in **Table 3.4**. Detailed impact monitoring results are presented in **Appendix C**.

Table 3.4: Summary of Construction Noise Monitoring Results

| Monitoring Station | Noise Level Range, dB(A) | Limit Level, dB(A) |
|-------------------------|--------------------------|--------------------|
| | Leq (30mins) | Leq (30mins) |
| NM1A ^{(1) (3)} | 64 - 70 | 75 |
| NM4 ⁽¹⁾ | 61 - 63 | 70 ⁽²⁾ |
| NM5 ^{(1) (3)} | 56 - 61 | 75 |
| NM6 ^{(1) (3)} | 62 - 68 | 75 |

Notes:

- (1) +3dB(A) Façade correction included;
- (2) The limit level will be reduced to 65dB(A) during school examination periods at NM4. School examination took place from 23 to 29 June 2022 during this reporting period.
- (3) Some of the noise measurement results were higher than the baseline monitoring levels. In order to reduce the influence of non-Project related noise on the monitoring results, these measurement results were corrected with reference to the baseline monitoring results.

No complaints were received from any sensitive receiver that triggered the Action Level. All monitoring results were also within the corresponding Limit Levels at all monitoring stations in the reporting period.

3.5 Conclusion

As the construction activities were far away from the monitoring stations, major sources of noise dominating the monitoring stations observed during the construction noise impact monitoring were traffic noise near NM1A and aircraft noise near NM6 during this reporting period. It is considered that the monitoring work during the reporting period was effective and there was no adverse impact attributable to the Project activities.

4 Water Quality Monitoring

Water quality monitoring of DO, pH, temperature, salinity, turbidity, and suspended solids (SS) was conducted three days per week, at mid-ebb and mid-flood tides, at a total of 14 water quality monitoring stations, comprising 6 impact (IM) stations, 5 sensitive receiver (SR) stations and 3 control (C) stations in the vicinity of water quality sensitive receivers around the airport island in accordance with the Manual. The purpose of water quality monitoring at the IM stations is to promptly capture any potential water quality impact from the Project before it could become apparent at sensitive receivers (represented by the SR stations). **Table 4.1** describes the details of the monitoring stations. **Figure 4.1** shows the locations of the monitoring stations.

Table 4.1: Monitoring Locations of Impact Water Quality Monitoring

| Monitoring Station | Description | Coordinates | | Parameters |
|---------------------|--|-------------|----------|---|
| | | Easting | Northing | |
| C1 | Control Station | 804247 | 815620 | <u>General Parameters</u> |
| C2 | Control Station | 806945 | 825682 | DO, pH, |
| C3 ⁽²⁾ | Control Station | 817803 | 822109 | Temperature, Salinity, Turbidity, SS |
| IM1 ⁽⁴⁾ | Impact Station | 806458 | 818351 | |
| IM2 ⁽⁴⁾ | Impact Station | 806236 | 819183 | |
| IM7 ⁽⁴⁾ | Impact Station | 806835 | 821349 | |
| IM10 ⁽⁴⁾ | Impact Station | 809838 | 822240 | |
| IM11 ⁽⁴⁾ | Impact Station | 810545 | 821501 | |
| IM12 ⁽⁴⁾ | Impact Station | 811519 | 821162 | |
| SR1A ⁽¹⁾ | Hong Kong-Zhuhai-Macao Bridge Hong Kong Boundary Crossing Facilities (HKBCF) Seawater Intake for cooling | 812660 | 819977 | <u>General Parameters</u> DO, pH, Temperature, Salinity, Turbidity, SS |
| SR2 | Planned marine park / hard corals at The Brothers / Tai Mo To | 814166 | 821463 | <u>General Parameters</u> DO, pH, Temperature, Salinity, Turbidity, SS |
| SR3 | Sha Chau and Lung Kwu Chau Marine Park / fishing and spawning grounds in North Lantau | 807571 | 822147 | <u>General Parameters</u> DO, pH, Temperature, Salinity, Turbidity, SS |
| SR4A | Sha Lo Wan | 807810 | 817189 | |
| SR8 ⁽³⁾ | Seawater Intake for cooling at Hong Kong International Airport (East) | 811623 | 820390 | |

Notes:

- (1) With the operation of HKBCF, water quality monitoring at SR1A station was commenced on 25 October 2018. To better reflect the water quality in the immediate vicinity of the intake, the monitoring location of SR1A has been shifted closer to the intake starting from 5 January 2019.
- (2) According to the Baseline Water Quality Monitoring Report, C3 station is not adequately representative as a control station of impact/ SR stations during the flood tide. The control reference has been changed from C3 to SR2 from 1 September 2016 onwards.
- (3) The monitoring location for SR8 is subject to further changes due to silt curtain arrangements and the progressive relocation of this seawater intake.
- (4) With the seawall completion and removal of enhanced open sea silt curtains, these monitoring stations were relocated back to their original locations. For IM2, there was minor adjustment of the monitoring location.

4.1 Action and Limit Levels

In accordance with the Manual, baseline water quality levels at the representative water quality monitoring stations were established as presented in the Baseline Water Quality Monitoring Report. The Action and Limit Levels of general water quality monitoring stipulated in the EM&A programme for triggering the relevant investigation and follow-up procedures under the programme are provided in **Table 4.2**. The control and impact stations during ebb tide and flood tide for general water quality monitoring are presented in **Table 4.3**.

Table 4.2: Action and Limit Levels for General Water Quality Monitoring

| Parameters | Action Level (AL) | | Limit Level (LL) | | |
|--|---------------------------------------|---|------------------|---|--|
| Action and Limit Levels for general water quality monitoring (excluding SR1A & SR8) | | | | | |
| General Water Quality Monitoring | DO in mg/l (Surface, Middle & Bottom) | Surface and Middle | | Surface and Middle | |
| | | 4.5mg/l | | 4.1mg/l | |
| | | Bottom | | Bottom | |
| | | 3.4mg/l | | 2.7mg/l | |
| Suspended Solids (SS) in mg/l | 23 | or 120% of upstream control station at the same tide of the same day, whichever is higher | 37 | or 130% of upstream control station at the same tide of the same day, whichever is higher | |
| Turbidity in NTU | 22.6 | | 36.1 | | |
| Action and Limit Levels SR1A | | | | | |
| SS (mg/l) | 33 | | 42 | | |
| Action and Limit Levels SR8 | | | | | |
| SS (mg/l) | 52 | | 60 | | |

Notes:

- (1) For DO measurement, non-compliance occurs when monitoring result is lower than the limits.
- (2) For parameters other than DO, non-compliance of water quality results when monitoring results is higher than the limits.
- (3) Depth-averaged results are used unless specified otherwise.

Table 4.3: The Control and Impact Stations during Flood Tide and Ebb Tide for General Water Quality Monitoring

| Control Station | Impact Stations |
|--------------------|--|
| Flood Tide | |
| C1 | IM1, IM2, IM7, SR3 |
| SR2 ⁽¹⁾ | IM7, IM10, IM11, IM12, SR1A, SR3, SR4A, SR8 |
| Ebb Tide | |
| C1 | SR4A |
| C2 | IM1, IM2, IM7, IM10, IM11, IM12, SR1A, SR2, SR3, SR8 |

Note:

- (1) As per findings of Baseline Water Quality Monitoring Report, the control reference has been changed from C3 to SR2 from 1 September 2016 onwards.

4.2 Monitoring Equipment

Table 4.4 summarises the equipment used in the reporting period for monitoring of specific water quality parameters under the water quality monitoring programme.

Table 4.4: Water Quality Monitoring Equipment

| Equipment | Brand and Model | Last Calibration Date | Calibration Certificate Provided in |
|--|--|-----------------------|--|
| Multifunctional Meter (measurement of DO, pH, temperature, salinity and turbidity) | YSI ProDSS (Serial No. 21G105356) | 08 Apr 2022 | Monthly EM&A Report No. 76, Appendix D |
| | YSI ProDSS (Serial No. 16H104233) | 10 Jun 2022 | Appendix D |
| | YSI ProDSS (Serial No. 16H104234) ⁽¹⁾ | 18 Mar 2022 | Monthly EM&A Report No. 75, Appendix D |
| | YSI ProDSS (Serial No. 17E100747) | 10 Jun 2022 | Appendix D |

Note:

- (1) The monitoring equipment was not used in the reporting period after the expiry date of the calibration certificate. (i.e. 17 Jun 2022)

Other equipment used as part of the impact water quality monitoring programme are listed in **Table 4.5**.

Table 4.5: Other Monitoring Equipment

| Equipment | Brand and Model |
|---|------------------------|
| Water Sampler | Van Dorn Water Sampler |
| Positioning Device (measurement of GPS) | Garmin eTrex Vista HCx |
| Current Meter (measurement of current speed and direction, and water depth) | Sontek HydroSurveyor |

4.3 Monitoring Methodology

4.3.1 Measuring Procedure

Water quality monitoring samples were taken at three depths (at 1m below surface, at mid-depth, and at 1m above bottom) for locations with water depth >6m. For locations with water depth between 3m and 6m, water samples were taken at two depths (surface and bottom). For locations with water depth <3m, only the mid-depth was taken. Duplicate water samples were taken and analysed.

The water samples for all monitoring parameters were collected, stored, preserved and analysed according to the Standard Methods, APHA 22nd ed. and/or other methods as agreed by the EPD. In-situ measurements at monitoring locations including temperature, pH, DO, turbidity, salinity, and water depth were collected by equipment listed in **Table 4.4** and **Table 4.5**. Water samples for SS analysis were stored in high density polythene bottles with no preservative added, packed in ice (cooled to 4°C without being frozen), delivered to the laboratory within 24 hours of collection.

4.3.2 Maintenance and Calibration

Calibration of In-situ Instruments

All in-situ monitoring instrument was checked, calibrated and certified by a laboratory accredited under HOKLAS before use. Responses of sensors and electrodes were checked with certified standard solutions before each use.

Wet bulb calibration for a DO meter was carried out before commencement of monitoring and after completion of all measurements each day. Calibration was not conducted at each monitoring location as daily calibration is adequate for the type of DO meter employed. A zero check in distilled water was performed with the turbidity probe at least once per monitoring day. The probe was then calibrated with a solution of known NTU. In addition, the turbidity probe was calibrated at least twice per month to establish the relationship between turbidity readings (in NTU) and levels of SS (in mg/l).

Calibration certificates of the monitoring equipment used in the reporting period are listed in **Table 4.4**.

4.3.3 Laboratory Measurement / Analysis

Analysis of SS have been carried out by a HOKLAS accredited laboratory, ALS Technichem (HK) Pty Ltd (Reg. No. HOKLAS 066). Sufficient water samples were collected at all the monitoring stations for carrying out the laboratory SS determination. The SS determination works were started within 24 hours after collection of the water samples. The analysis of SS have followed the standard methods summarised in **Table 4.6**. The QA/QC procedures for laboratory measurement/ analysis of SS were presented in Appendix F of the Construction Phase Monthly EM&A Report No.8.

Table 4.6: Laboratory Measurement/ Analysis of SS

| Parameters | Instrumentation | Analytical Method | Reporting Limit |
|------------|--------------------|-------------------|-----------------|
| SS | Analytical Balance | APHA 2540D | 2mg/l |

4.4 Summary of Monitoring Results

The water quality monitoring schedule for the reporting period is updated and provided in **Appendix B**.

The water quality monitoring results for all parameters, except DO and SS, obtained during the reporting period were within their corresponding Action and Limit Levels. The detailed monitoring results are presented in **Appendix C**.

For DO and SS, some of the testing results triggered the corresponding Action Levels, and investigations were conducted accordingly.

Table 4.7 to **Table 4.8** present the summary of the DO and SS compliance status at IM and SR stations during mid-ebb and mid-flood tides for the reporting period.

Table 4.7: Summary of DO (Bottom) Compliance Status (Mid-Ebb Tide)

Note: Detailed results are presented in **Appendix C**.

Legend:

| | |
|---|---|
| | The monitoring results were within the corresponding Action and Limit Levels |
| | Monitoring result triggered the Action Level at monitoring station located upstream of the Project based on dominant tidal flow |
| D | Monitoring result triggered the Action Level at monitoring station located downstream of the Project based on dominant tidal flow |
| | Upstream station with respect to the Project during the respective tide based on dominant tidal flow |

Monitoring results triggered the corresponding Action Levels on two monitoring days. Some cases occurred at monitoring stations upstream of the Project during ebb and flood tide and would unlikely be affected by the Project.

In accordance with Event and Action Plan stipulated in the Manual, IEC and Contractors were informed when the corresponding Action Levels were triggered. Repeat in-situ measurement was conducted on 26 June 2022 according to the requirements as stipulated in the Manual.

Investigation focusing on the cases which occurred at monitoring stations located downstream of the Project was carried out. Details of the Project's marine construction activities and site observations of the concerned monitoring days were collected. Findings were summarised in **Table 4.9** and **Table 4.10**.

Table 4.9: Summary of Findings from Investigation of DO Monitoring Results

| Date | Marine construction works nearby | Approximate distance from marine construction works | Status of water quality measures (if applicable) | Construction vessels in the vicinity | Turbidity / Silt plume observed near the monitoring station | Action or Limit Level triggered due to Project |
|------------|----------------------------------|---|--|--------------------------------------|---|--|
| 25/06/2022 | Seawall construction | At least 2 km | Silt curtain deployed | No | No | No |

Table 4.10: Summary of Findings from Investigation of SS Monitoring Results

| Date | Marine construction works nearby | Approximate distance from marine construction works | Status of water quality measures (if applicable) | Construction vessels in the vicinity | Turbidity / Silt plume observed near the monitoring station | Action or Limit Level triggered due to Project |
|------------|----------------------------------|---|--|--------------------------------------|---|--|
| 14/06/2022 | Underwater cutting of steel pile | At least 5 km | Silt curtain deployed | No | No | No |

The investigation confirmed that marine construction works were conducted with silt curtains deployed during the concerned monitoring days. The silt curtains were maintained properly and checked by ET regularly. No muddy water discharges from outfalls of the reclaimed land were observed. The repeat measurement results were within the corresponding Action or Limit Levels.

For the DO result recorded at SR4A on 25 June 2022 triggering Action Level, it is noted that the DO concentrations at other downstream stations closer to the marine works area (e.g. IM1 and IM2) were within the corresponding Action or Limit Levels, implying that the case might be due to external factors out of the Project Area. No silt plume, construction vessel, spillage incident or specific observation at outfalls were observed in the vicinity when monitoring was undertaken at the monitoring station. Therefore, the case was considered unlikely due to the Project.

4.5 Conclusion

During the reporting period, it is noted that most of the monitoring results were within their corresponding Action and Limit Levels, while some DO measurement results and one SS measurement result triggered the corresponding Action Levels, investigations were conducted accordingly.

Based on the investigation findings, all results that triggered the corresponding Action Levels were not due to the project. Therefore, the Project did not cause adverse impact at the water quality sensitive receivers. All required actions under the Event and Action Plan were followed. These cases appeared to be due to natural fluctuation or other sources not related to the Project.

Nevertheless, as part of the EM&A programme, the construction methods and mitigation measures for water quality will continue to be monitored and opportunities for further enhancement will continue to be explored and implemented where possible, to strive for better protection of water quality and the marine environment.

In the meantime, the contractors were reminded to implement and maintain all mitigation measures as recommended in the Manual during weekly site inspection and regular environmental management meetings.

5 Waste Management

In accordance with the Manual, the waste generated from construction activities was audited once per week to determine if wastes are being managed in accordance with the Waste Management Plan (WMP) prepared for the Project, contract-specific WMP, and any statutory and contractual requirements. All aspects of waste management including waste generation, storage, transportation and disposal were assessed during the audits.

5.1 Action and Limit Levels

The Action and Limit Levels of the construction waste are provided in **Table 5.1**.

Table 5.1: Action and Limit Levels for Construction Waste

| Monitoring Stations | Action Level | Limit Level |
|---------------------|---|---|
| Construction Area | When one valid documented complaint is received | Non-compliance of the WMP, contract-specific WMPs, any statutory and contractual requirements |

5.2 Waste Management Status

Weekly monitoring on all works contracts were carried out by the ET to check and monitor the implementation of proper waste management practices during the construction phase.

Recommendations made included provision and maintenance of proper chemical waste storage area, as well as handling, segregation, and regular disposal of general refuse. The contractors have taken actions to implement the recommended measures. Waste management audits were carried out by ET according to the requirement of the Waste Management Plan, Updated EM&A Manual and the implementation schedule of the waste management mitigation measures in **Appendix A**.

Based on updated contractors' information, construction waste generated in the reporting period is summarised in **Table 5.2**. ET and IEC have carried out site audits regularly and reviewed the trip ticket system. Dedicated areas for sorting of materials are established on site. Recyclable materials such as steel, reinforcement bar, structural steel, aluminium, copper, other metals, paper and plastic are sorted on-site and transported off-site for recycling during this reporting period.

Table 5.2: Construction Waste Statistics

| | C&D Material Stockpiled for Reuse or Recycle ⁽¹⁾ (m ³) | C&D Material Reused in the Project (m ³) | C&D Material Reused in other Projects (m ³) | C&D Material Transferred to Public Fill (m ³) | Chemical Waste (kg) | Chemical Waste (l) | General Refuse (tonne) |
|--------------------------|---|--|---|---|---------------------|--------------------|------------------------|
| May 2022 ⁽²⁾ | 73,565 | 3,354 | 22,306 | 8,313* | 20 | 0 | 3,358 |
| June 2022 ⁽³⁾ | 34,177 | 3,209 | 40,825 | 10,305 | 1,000 | 0 | 2,679 |

Notes:

- (1) C&D refers to Construction and Demolition.
- (2) Updated figure for the previous month is reported and marked with an asterisk (*). Updated figures for earlier months will be reported in the forthcoming Quarterly and Annual EM&A Reports.
- (3) The data was based on the information provided by contractors up to the submission date of this Monthly EM&A Report, and might be updated in the forthcoming Monthly EM&A Report.

There were no complaints, non-compliance of the WMP, contract-specific WMPs, statutory and contractual requirements that triggered Action and Limit Levels in the reporting period.

5.3 Marine Sediment Management

Marine sediment is managed according to the EIA Report, Updated EM&A Manual, Waste Management Plan and the proposal of Further Development on Treatment Level / Details and the Reuse Mode for Marine Sediment (hereinafter referred to as “Further Development Proposal”) of the Project. The sampling process, storage conditions of the excavated marine sediment, treatment process, final backfilling location as well as associated records were inspected and checked by ET and verified by IEC to ensure they were in compliance with the requirements as stipulated in the Waste Management Plan and Further Development Proposal.

Sampling works for marine sediment generated from the reclaimed land area was on-going during the reporting period. The details of the marine sediment sampling, treatment and backfilling will be reported in the Annual EM&A Reports.

6 Chinese White Dolphin Monitoring

In accordance with the Manual, CWD monitoring by small vessel line-transect survey supplemented by land-based theodolite tracking survey and passive acoustic monitoring should be conducted during construction phase.

The small vessel line-transect survey should be conducted at a frequency of two full surveys per month, while land-based theodolite tracking survey should be conducted at a frequency of one day per month per station at Sha Chau (SC) and Lung Kwu Chau (LKC) during the construction phase as stipulated in the Manual.

6.1 Action and Limit Levels

The Action and Limit Levels for CWD monitoring were formulated by the action response approach using the running quarterly dolphin encounter rates STG and ANI derived from the baseline monitoring data, as presented in the CWD Baseline Monitoring Report. The derived values of Action and Limit Levels for CWD monitoring were summarised in **Table 6.1**.

Table 6.1: Derived Values of Action and Limit Levels for Chinese White Dolphin Monitoring

| NEL, NWL, AW, WL and SWL as a Whole | |
|-------------------------------------|--|
| Action Level ⁽³⁾ | Running quarterly ⁽¹⁾ STG < 1.86 & ANI < 9.35 |
| Limit Level ⁽³⁾ | Two consecutive running quarterly ⁽²⁾ (3-month) STG < 1.86 & ANI < 9.35 |

Notes: (referring to the baseline monitoring report)

- (1) Action Level – running quarterly encounter rates STG & ANI of this month will be calculated from the reporting period and the two preceding survey months.
- (2) Limit Level – two consecutive running quarters mean both the running quarterly encounter rates of the preceding month and the running quarterly encounter rates of this month.
- (3) Action Level and/or Limit Level will be triggered if both STG and ANI fall below the criteria.

6.2 CWD Monitoring Transects and Stations

6.2.1 Small Vessel Line-transect Survey

Small vessel line-transect surveys were conducted along the transects covering Northeast Lantau (NEL), Northwest Lantau (NWL), Airport West (AW), West Lantau (WL) and Southwest Lantau (SWL) areas as proposed in the Manual, which are consistent with the Agriculture, Fisheries and Conservation Department (AFCD) long-term monitoring programme (except the addition of AW). The AW transect has not been previously surveyed in the AFCD programme due to the restrictions of HKIA Approach Area, nevertheless, this transect was established during the EIA of the 3RS Project and refined in the Manual with the aim to collect project specific baseline information within the HKIA Approach Area to fill the data gap that was not covered by the AFCD programme. This also provided a larger sample size for estimating the density, abundance and patterns of movements in the broader study area of the project.

The planned vessel survey transect lines following the waypoints set for construction phase monitoring as proposed in the Manual are depicted in **Figure 6.1** with the waypoint coordinates of all transect lines given in **Table 6.2**, which are subject to on-site refinement based on the actual survey conditions and constraints.

Table 6.2: Coordinates of Transect Lines in NEL, NWL, AW, WL and SWL Survey Areas

| Waypoint | Easting | Northing | Waypoint | Easting | Northing |

6.2.2 Land-based Theodolite Tracking Survey

Land-based theodolite tracking survey stations were set up at two locations, one facing east/south/west on the southern slopes of Sha Chau (SC), and the other facing north/northeast/northwest at Lung Kwu Chau (LKC). The stations (D and E) are depicted in **Figure 6.2** and shown in **Table 6.3** with position coordinates, height of station and approximate distance of consistent theodolite tracking capabilities for CWD.

Table 6.3: Land-based Theodolite Survey Station Details

| Stations | Location | Geographical Coordinates | Station Height (m) | Approximate Tracking Distance (km) |
|----------|---------------------|--------------------------------------|--------------------|------------------------------------|
| D | Sha Chau (SC) | 22° 20' 43.5" N 113° 53' 24.66" E | 45.66 | 2 |
| E | Lung Kwu Chau (LKC) | 22° 22' 44.83" N 113° 53' 0.2" E | 70.40 | 3 |

6.3 CWD Monitoring Methodology

6.3.1 Small Vessel Line-transect Survey

Small vessel line-transect surveys provided data for density and abundance estimation and other assessments using distance-sampling methodologies, specifically, line-transect methods.

The surveys involved small vessel line-transect data collection and have been designed to be similar to, and consistent with, previous surveys for the AFCD for their long-term monitoring of small cetaceans in Hong Kong. The survey was designed to provide systematic, quantitative measurements of density, abundance and habitat use.

As mentioned in **Section 6.2.1**, the transects covered NEL, NWL, AW, WL and SWL areas as proposed in the Manual, which are consistent with the AFCD long-term monitoring programme (except AW). There are two types of transect lines:

- Primary transect lines: the parallel and zigzag transect lines as shown in **Figure 6.1**; and
- Secondary transect lines: transect lines connecting between the primary transect lines and going around islands.

All data collected on both primary and secondary transect lines were used for analysis of sighting distribution, group size, activities including association with fishing boat, and mother-calf pairs. Only on-effort data collected under favourable conditions of Beaufort 0-3 and visibility of approximately 1200 m or beyond were used for analysis of the CWD encounter rates.

A 15-20m vessel with a flying bridge observation platform about 4 to 5m above water level and unobstructed forward view, and a team of three to four observers were deployed to undertake the surveys. Two observers were on search effort at all times when following the transect lines with a constant speed of 7 to 8 knots (i.e. 13 to 15 km per hour), one using 7X handheld binoculars and the other using unaided eyes and recording data.

During on-effort survey periods, the survey team recorded effort data including time, position (waypoints), weather conditions (Beaufort sea state and visibility) and distance travelled in each series with assistance of a handheld GPS device. The GPS device also continuously and automatically logged data including time, position (latitude and longitude) and vessel speed throughout the entire survey.

When CWDs were seen, the survey team was taken off-effort, the dolphins were approached and photographed for photo-ID information (using a Canon 7D [or similar] camera and long 300 mm+

telephoto lens), then followed until they were lost from view. At that point, the boat returned (off effort) to the survey line at the closest point after obtaining photo records of the dolphin group and began to survey on effort again.

Focal follows of dolphins would be used for providing supplementary information only where practicable (i.e. when individual dolphins or small stable groups of dolphins with at least one member that could be readily identifiable with unaided eyes during observations and weather conditions are favourable). These would involve the boat following (at an appropriate distance to minimise disturbance) an identifiable individual dolphin for an extended period of time, and collecting detailed data on its location, behaviour, response to vessels, and associates.

6.3.2 Photo Identification

CWDs can be identified by their unique features like presence of scratches, nick marks, cuts, wounds, deformities of their dorsal fin and distinguished colouration and spotting patterns.

When CWDs were observed, the survey team was taken off-effort, the dolphins were approached and photographed for photo-ID information (using a Canon 7D [or similar] camera and long 300 mm+ telephoto lens). The survey team attempted to photograph both sides of every single dolphin in the group as the colouration and spotting pattern on both sides may not be identical. The photos were taken at the highest available resolution and stored on Compact Flash memory cards for transferring into a computer.

All photos taken were initially examined to sort out those containing potentially identifiable individuals. These sorted-out images would then be examined in detail and compared to the CWD photo-identification catalogue established for 3RS Project during the baseline monitoring stage.

6.3.3 Land-based Theodolite Tracking Survey

Land-based theodolite tracking survey obtains fine-scale information on the time of day and movement patterns of the CWDs. A digital theodolite (Sokkia/Sokkisha Model DT5 or similar equipment) with 30-power magnification and 5-s precision was used to obtain the vertical and horizontal angle of each dolphin and vessel position. Angles were converted to geographic coordinates (latitude and longitude) and data were recorded using *Pythagoras* software, Version 1.2. This method delivers precise positions of multiple spatially distant targets in a short period of time. The technique is fully non-invasive, and allows for time and cost-effective descriptions of dolphin habitat use patterns at all times of daylight.

Three surveyors (one theodolite operator, one computer operator, and one observer) were involved in each survey. Observers searched for dolphins using unaided eyes and handheld binoculars (7X50). Theodolite tracking sessions were initiated whenever an individual CWD or group of CWDs was located. Where possible, a distinguishable individual was selected, based on colouration, within the group. The focal individual was then continuously tracked via the theodolite, with a position recorded each time the dolphin surfaced. In case an individual could not be positively distinguished from other members, the group was tracked by recording positions based on a central point within the group whenever the CWD surfaced. Tracking continued until animals were lost from view; moved beyond the range of reliable visibility (>1-3km, depending on station height); or environmental conditions obstructed visibility (e.g., intense haze, Beaufort sea state >4, or sunset), at which time the research effort was terminated. In addition to the tracking of CWD, all vessels that moved within 2-3km of the station were tracked, with effort made to obtain at least two positions for each vessel.

Theodolite tracking included focal follows of CWD groups and vessels. Priority was given to tracking individual or groups of CWD. The survey team also attempted to track all vessels moving within 1 km of the focal CWD.

6.4 Monitoring Results and Observations

6.4.1 Small Vessel Line-transect Survey

Survey Effort

Within this reporting period, two complete sets of small vessel line-transect surveys were conducted on the 8, 10, 13, 16, 21, 22, 23 and 24 June 2022 covering all transects in NEL, NWL, AW, WL and SWL survey areas for twice.

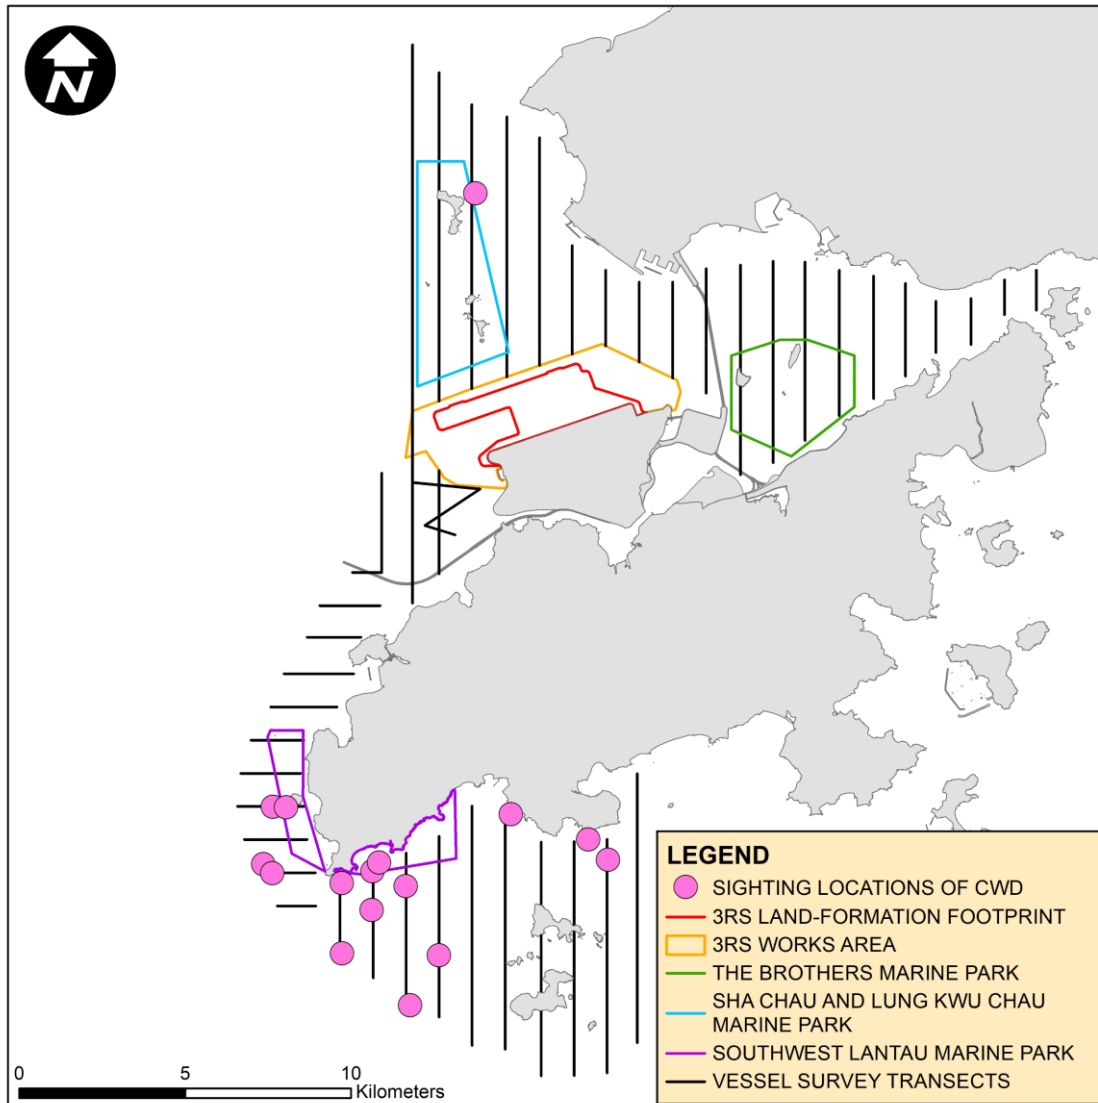

A total of around 448.78 km of survey effort was collected from these surveys and 420.85 km of the survey effort was being conducted under favourable weather condition (i.e. Beaufort Sea State 3 or below with favourable visibility). Details of the survey effort are given in **Appendix C**.

Sighting Distribution

In the current reporting period, 16 sightings with 68 dolphins were sighted. All these sightings were on-effort records under favourable weather condition (i.e. Beaufort Sea State 3 or below with favourable visibility). Details of cetacean sightings are presented in **Appendix C**.

Distribution of all CWD sightings recorded in the current reporting period is illustrated in **Figure 6.3**. In NWL, a CWD group was observed at the east of Lung Kwu Chau. CWD groups in WL were observed at waters near Peaked Hill and Fan Lau. In SWL, there was a cluster of CWD groups recorded off Fan Lau. There were also a few CWD sightings recorded at the southwestern part of survey area away from shore, as well as at the waters around Lo Kei Wan. There was no CWD sighting recorded in NEL survey area during the reporting period.

Figure 6.3: Sightings Distribution of Chinese White Dolphins

Remarks: (1) Please note that there are 16 pink circles on the map indicating the sighting locations of CWDs. Some of them were very close to each other and therefore may appear overlapped on this distribution map. (2) Marine park excludes land area and the landward boundary generally follows the high water mark along the coastline.

Encounter Rate

Two types of dolphin encounter rates were calculated based on the vessel survey data. They included the number of dolphin sightings per 100 km survey effort (STG) and total number of dolphins per 100 km survey effort (ANI) in the whole survey area (i.e. NEL, NWL, AW, WL and SWL). In the calculation of dolphin encounter rates, only survey data collected under favourable weather condition (i.e. Beaufort Sea State 3 or below with favourable visibility) were used. The formulae used for calculation of the encounter rates are shown below:

Encounter Rate by Number of Dolphin Sightings (STG)

$$STG = \frac{\text{Total No. of On – effort Sightings}}{\text{Total Amount of Survey Effort (km)}} \times 100$$

Encounter Rate by Number of Dolphins (ANI)

$$ANI = \frac{\text{Total No. of Dolphins from On – effort Sightings}}{\text{Total Amount of Survey Effort (km)}} \times 100$$

(Notes: Only data collected under Beaufort 3 or below condition were used)

In this reporting period, a total of around 420.85 km of survey effort were conducted under Beaufort Sea State 3 or below with favourable visibility, whilst a total number of 16 on-effort sightings with 68 dolphins were sighted under such condition. Calculation of the encounter rates for the month are shown in **Appendix C**.

For the running quarter of the reporting period (i.e., from April to June 2022), a total of around 1284.24 km of survey effort were conducted under Beaufort Sea State 3 or below with favourable visibility, whilst a total number of 45 on-effort sightings and a total number of 166 dolphins from on-effort sightings were obtained under such condition. Calculation of the running quarterly encounter rates are shown in **Appendix C**.

The STG and ANI of CWD in the whole survey area (i.e. NEL, NWL, AW, WL and SWL) during the reporting period and during the running quarter are presented in **Table 6.4** below and compared with the Action Level. The running quarterly encounter rates STG and ANI remain above the Action Level, thus the Action Level is not triggered.

Table 6.4: Comparison of CWD Encounter Rates of the Whole Survey Area with Action Levels

| | Encounter Rate (STG) | Encounter Rate (ANI) |
|--|--|----------------------|
| June 2022 | 3.80 | 16.16 |
| Running Quarter from April to June 2022 ⁽¹⁾ | 3.50 | 12.93 |
| Action Level | Running quarterly ⁽¹⁾ STG < 1.86 & ANI < 9.35 | |

Note: (1) Running quarterly encounter rates STG & ANI were calculated from data collected in the reporting period and the two preceding survey months, containing six sets of transect surveys for all monitoring areas. Action Level will be triggered if both STG and ANI fall below the criteria.

Group Size

In the current reporting period, 16 groups of 68 dolphins in total were sighted, and the average group size of CWDs was 4.3 dolphins per group. Over half of the CWD sightings were with small group size (i.e. 1-2 dolphins). There were two CWD sightings with large group size (i.e. 10 or more dolphins) recorded in SWL and WL survey areas.

Activities and Association with Fishing Boats

There were five CWD sightings recorded engaging in foraging activities in the current reporting period. No association with operating fishing boat was recorded.

Mother-calf Pair

In this reporting period, there were four CWD sightings recorded with mother-and-unspotted juvenile pair(s) and/or mother-and-unspotted calf pair(s) in NWL, WL and SWL survey areas.

6.4.2 Photo Identification

In the current reporting period, a total number of 30 different CWD individuals were identified for totally 34 times. A summary of photo identification works is presented in **Table 6.5**. Representative photos of these individuals are given in **Appendix C**.

Table 6.5: Summary of Photo Identification

| Individual ID | Date of Sighting (dd-mmm-yy) | Sighting Group No. | Area | Individual ID | Date of Sighting (dd-mmm-yy) | Sighting Group No. | Area |
|---------------|------------------------------|--------------------|------|---------------|------------------------------|--------------------|------|
| NLMM009 | 13-Jun-22 | 1 | NWL | SLMM075 | 24-Jun-22 | 7 | SWL |
| NLMM015 | 13-Jun-22 | 1 | NWL | SLMM076 | 24-Jun-22 | 7 | SWL |
| NLMM027 | 24-Jun-22 | 7 | SWL | WLMM003 | 23-Jun-22 | 1 | SWL |
| NLMM040 | 24-Jun-22 | 7 | SWL | WLMM013 | 24-Jun-22 | 2 | WL |
| NLMM069 | 24-Jun-22 | 4 | WL | | | 4 | WL |
| NLMM085 | 24-Jun-22 | 7 | SWL | WLMM019 | 23-Jun-22 | 5 | SWL |
| SLMM002 | 24-Jun-22 | 5 | SWL | WLMM049 | 23-Jun-22 | 5 | SWL |
| SLMM012 | 22-Jun-22 | 8 | SWL | | 24-Jun-22 | 7 | SWL |
| | 24-Jun-22 | 5 | SWL | WLMM052 | 24-Jun-22 | 4 | WL |
| SLMM014 | 23-Jun-22 | 3 | SWL | WLMM056 | 24-Jun-22 | 5 | SWL |
| SLMM025 | 23-Jun-22 | 2 | SWL | WLMM071 | 23-Jun-22 | 5 | SWL |
| SLMM034 | 24-Jun-22 | 5 | SWL | WLMM079 | 23-Jun-22 | 5 | SWL |
| SLMM037 | 22-Jun-22 | 8 | SWL | WLMM131 | 22-Jun-22 | 7 | SWL |
| | 24-Jun-22 | 5 | SWL | WLMM147 | 23-Jun-22 | 5 | SWL |
| SLMM050 | 23-Jun-22 | 5 | SWL | WLMM163 | 23-Jun-22 | 5 | SWL |
| SLMM060 | 22-Jun-22 | 9 | SWL | WLMM164 | 13-Jun-22 | 1 | NWL |
| SLMM074 | 24-Jun-22 | 7 | SWL | WLMM176 | 24-Jun-22 | 4 | WL |

6.4.3 Land-based Theodolite Tracking Survey

Survey Effort

Land-based theodolite tracking surveys were conducted at LKC on 22 June 2022 and at SC on 24 June 2022, with a total of two days of land-based theodolite tracking survey effort accomplished in this reporting period. No CWD group was tracked off LKC or SC stations during the reporting period. Information of survey effort and CWD groups are presented in **Table 6.6**. Details of the survey effort are presented in **Appendix C**.

Table 6.6: Summary of Survey Effort and CWD Group of Land-based Theodolite Tracking

| Land-based Station | No. of Survey Sessions | Survey Effort (hh:mm) | No. of CWD Groups Sighted | CWD Group Sighting per Survey Hour |
|---------------------|------------------------|-----------------------|---------------------------|------------------------------------|
| Lung Kwu Chau (LKC) | 1 | 6:00 | 0 | 0 |
| Sha Chau (SC) | 1 | 6:00 | 0 | 0 |
| TOTAL | 2 | 12:00 | 0 | 0 |

6.5 Progress Update on Passive Acoustic Monitoring

Underwater acoustic monitoring using Passive Acoustic Monitoring (PAM) should be undertaken during land formation related construction works. Both C-POD and F-POD are considered as effective PAM devices in detecting CWD occurrence, and F-POD was the main PAM device deployed where feasible. During this reporting period, the F-POD was remained underwater and positioned at south of Sha Chau Island inside the SCLKCMP (**Figure 6.4**). The F-POD was last deployed on 16 May 2022 and the next retrieval is scheduled in late-July 2022. Acoustic data would be reviewed to give an indication of CWD occurrence patterns and anthropogenic noise information. Analysis would involve use of proprietary software for objective automated data analyses and experienced analysts to perform visual validation for assessment of dolphin detection. As the period of data collection and analysis takes about four months, PAM results could not be reported in monthly intervals but report for supplementing the annual CWD monitoring analysis.

6.6 Site Audit for CWD-related Mitigation Measures

During the reporting period, silt curtains were provided by the contractor for marine filling works, in which dolphin observers were also deployed by the contractor in accordance with the MMWP. Overall, 1 to 3 dolphin observation stations and teams of at least two dolphin observers were deployed by the contractors for continuous monitoring of the DEZ for seawall construction works in accordance with the DEZ Plan. Trainings for the proposed dolphin observers on the implementation of MMWP and DEZ monitoring were provided by the ET prior to the aforementioned works, with a cumulative total of 704 individuals being trained and the training records kept by the ET. From the contractors' MMWP and DEZ monitoring records, no dolphin or other marine mammals were observed within or around the silt curtain or DEZ during this reporting month. These contractors' records were also audited by the ET during site inspection.

Audits of acoustic decoupling measures for construction vessels were carried out during weekly site inspection and the observations are summarised in **Section 7.1**. Audits of SkyPier high speed ferries route diversion and speed control and construction vessel management are presented in **Section 7.4** and **Section 7.5** respectively.

6.7 Timing of reporting CWD Monitoring Results

Detailed analysis of CWD monitoring results collected by small vessel line-transect survey will be provided in future quarterly reports. Detailed analysis of CWD monitoring results collected by land-based theodolite tracking survey and PAM will be provided in future annual reports after a larger sample size of data has been collected.

6.8 Summary of CWD Monitoring

Monitoring of CWD was conducted with two complete sets of small vessel line-transect surveys and two days of land-based theodolite tracking survey effort. The running quarterly encounter rates STG and ANI in the reporting period did not trigger the Action Level for CWD monitoring.

7 Environmental Site Inspection and Audit

7.1 Environmental Site Inspection

Site inspections of the construction works to audit the implementation of proper environmental pollution control and mitigation measures for the Project were conducted by ET and IEC on a weekly and bi-weekly basis, respectively. The weekly site inspection schedule of the construction works is provided in **Appendix B**. Besides, physically ad-hoc site inspections were also conducted by ET and IEC if environmental problems were identified, or subsequent to receipt of an environmental complaint, or as part of the investigation work. These site inspections provided a direct means to reinforce the specified environmental protection requirements and pollution control measures in construction sites.

During site inspections, environmental situation, status of implementation of pollution control and mitigation measures were observed. Environmental documents and site records, including waste disposal record, maintenance record of environmental equipment, and relevant environmental permit and licences, were also checked on site. Observations were recorded in the site inspection checklist and passed to the contractor together with the recommended mitigation measures where necessary in order to advise contractors on environmental improvement, awareness and on-site enhancement measures. The observations were made with reference to the following information during the site inspections:

- The EIA and EM&A requirements;
- Relevant environmental protection laws, guidelines, and practice notes;
- The EP conditions and other submissions under the EP;
- Monitoring results of EM&A programme;
- Works progress and programme;
- Proposal of individual works;
- Contract specifications on environmental protection; and
- Previous site inspection results.

Good site practices were observed in site inspections during the reporting period. Advice was given when necessary to ensure the construction workforce were familiar with relevant procedures, and to maintain good environmental performance on site. Regular toolbox talks on environmental issues were organised for the construction workforce by the contractors to ensure understanding and proper implementation of environmental protection and pollution control mitigation measures.

A summary of implementation status of the environmental mitigation measures for the construction phase of the Project during the reporting period is provided in **Appendix A**.

7.2 Landscape and Visual Mitigation Measures

Implementation of applicable landscape and visual mitigation measures (reference to the environmental protection measures CM1 – CM10 in **Appendix A**) was monitored in accordance with the Manual. All measures undertaken by both the contractor and the landscape contractor during the construction phase and first year of the operation phase shall be audited by a landscape architect, as a member of the ET, on a regular basis to ensure compliance with the intended aims of the measures. Site inspections shall be undertaken at least once every two months during the operation phase.

The implementation status of the environmental protection measures is summarized below in **Table 7.1**. Examples of landscape and visual mitigation measures are shown in **Table 7.2**. The

monitoring programme for detailed design, construction, establishment works and long term management (10 years) stages is presented in **Table 7.3**. Event and Action Plan for Landscape and Visual impacts is stated in **Table 7.4**.

Table 7.1: Landscape and Visual – Construction Phase Audit Summary

| Landscape and Visual Mitigation Measures during Construction | Implementation Status | Relevant Contract(s) in the Reporting Period |
|---|---|--|
| CM1- The construction area and contractor’s temporary works areas shall be minimised to avoid impacts on adjacent landscape. | The implementation of mitigation measures was checked by ET during weekly site inspection and reported by the Contractors during the monthly Environmental Management Meetings. Implementation of the measures CM5, CM6 and CM7 by Contractors was observed. | All works contracts |
| CM2 – Reduction of construction period to practical minimum | | |
| CM3 – Phasing of the construction stage to reduce visual impacts during the construction phase. | | |
| CM4 – Construction traffic (land and sea) including construction plants, construction vessels and barges shall be kept to a practical minimum. | | |
| CM5 – Erection of decorative mesh screens or construction hoardings around works areas in visually unobtrusive colours. | | |
| CM6 – Avoidance of excessive height and bulk of site buildings and structures | | |
| CM7 – Control of night-time lighting by hooding all lights and through minimisation of night working periods | | |
| CM8 – All existing trees shall be carefully protected during construction. Detailed Tree Protection Specification shall be provided in the Contract Specification. Under this specification, the Contractor shall be required to submit, for approval, a detailed working method statement for the protection of trees prior to undertaking any works adjacent to all retained trees, including trees in contractor’s works areas | Tree Protection Specifications were provided in the relevant Contract Specifications respectively for implementation by the Contractors under the Project. The Contractors’ performance on the implementation of the tree maintenance and protection measures were observed and checked by the ET weekly during construction period. | 3302, 3508, 3602, 3801 |

| Landscape and Visual Mitigation Measures during Construction | Implementation Status | Relevant Contract(s) in the Reporting Period |
|---|--|--|
| <p>CM9 – Trees unavoidably affected by the works shall be transplanted where practical. A detailed Tree Transplanting Specification shall be provided in the Contract Specification, if applicable. Sufficient time for necessary tree root and crown preparation periods shall be allowed in the project programme</p> | <p>Tree Transplanting Specifications were provided in the relevant Contract Specifications respectively for implementation by the Contractors under the Project where trees would unavoidably be affected by the construction works.</p> <p>The Contractors were required to submit Method Statements for tree transplanting prior to the transplanting works. Tree inspections were conducted by ET to check the tree transplanting works implemented by the Contractors on site.</p> <p>The Contractors' performance on the implementation of trees maintenance and protection measures on transplanted trees were observed and checked by the ET bi-monthly during the 12-month establishment period after the completion of each batch of transplanting works.</p> <p>Long term management of the transplanted trees was currently monitored by ET annually.</p> | 3508, 3801 |
| <p>CM10 – Land formation works shall be followed with advanced hydroseeding around taxiways and runways as soon as practical</p> | <p>To be implemented around taxiways and runways as soon as practicable.</p> | 3303 |

Table 7.2: Examples of Landscape and Visual Mitigation Measures in the Reporting Period

| | | |
|---|---|--|
|  |  |  |
| <p>Erection of site hoardings around works area in unobtrusive colours (CM5)</p> | <p>Avoidance of excessive height and bulk of site buildings (CM6)</p> | <p>Control of night-time lighting using light hooding and minimisation of night working period (CM7)</p> |
|  |  |  |
| <p>General view of tree protection zone for retained tree (CM8)</p> | <p>General view of a transplanted tree (CM9)</p> | <p>General view of advanced hydroseeding around taxiways and runways (CM10)</p> |

In accordance with the Updated EM&A Manual, all existing trees shall be protected carefully during construction. Trees unavoidably affected by the works shall be transplanted where practical. In this reporting period, the cumulative total number of retained trees and transplanted trees under the Project were 45 and 26, and it is confirmed that 2 retained trees outside the site hoarding of C3602 were felled. Details of the retained trees, transplanted trees and to-be-transplanted trees under the Project are summarized in **Table 7.5**.

Details of the retained trees are to be discussed in the Quarterly EM&A reports.

Table 7.3: Monitoring Programme for Landscape and Visual

| Stage | Monitoring Task | Monitoring Report | Form of Approval | Frequency |
|--------------------------------|---|--|--|---|
| Detailed Design | Checking of design works against the recommendations of the landscape and visual impact assessments within the EIA shall be undertaken during detailed design and tender stage, to ensure that they fulfil the intention of the mitigation measures. Any changes to the design, including design changes on site shall also be checked. | Report by AAHK / PM confirming that the design conforms to requirements of EP. | Approved by Client | At the end of the Detailed Design Phase |
| Construction | Checking of the contractor's operations during the construction period. | Report on Contractor's compliance, by ET | Counter signature of report by IEC | Weekly |
| Establishment Works | Checking of the planting works during the twelve-month Establishment Period after completion of each batch of transplanting works. | Report on Contractor's compliance, by ET | Counter signature of report by IEC | Every two months |
| Long Term Management (10 year) | Monitoring of the long-term management of the planting works in the period up to 10 years after completion of each batch of transplanting works. | Report on Compliance by ET or Maintenance Agency as appropriate | Counter signature of report by Management Agency | Annually |

Table 7.4: Event and Action Plan for Landscape and Visual

| Event Action Level | Action | | | |
|--------------------------------|---|---|---|----------------------------------|
| | ET | IEC | AAHK / PM | Contractor |
| Design Check | Check final design conforms to the requirements of EP and prepare report. | Check report. Recommend remedial design if necessary. | Undertake remedial design if necessary. | |
| Non-conformity on one occasion | Identify source. | Check report. | Notify Contractor. | Amend working methods to prevent |

| Event Action Level | Action | | | |
|-------------------------|--|---|---|---|
| | Inform IEC and AAHK / PM. Discuss remedial actions with IEC, AAHK / PM and Contractor. Monitor remedial actions until rectification has been completed. | Check Contractor's working method. Discuss with ET and Contractor on possible remedial measures. Advise AAHK / PM on effectiveness of proposed remedial measures. Check implementation of remedial measures. | Ensure remedial measures are properly implemented. | recurrence of non-conformity. Rectify damage and undertake additional action necessary. |
| Repeated Non-conformity | Identify source. Inform IEC and AAHK / PM. Increase monitoring frequency. Discuss remedial actions with IEC, AAHK / PM and Contractor. Monitor remedial actions until rectification has been completed. If non-conformity stops, cease additional monitoring. | Check monitoring report. Check Contractor's working method. Discuss with ET and Contractor on possible remedial measures. Advise AAHK / PM on effectiveness of proposed remedial measures. Supervise implementation of remedial measures. | Notify Contractor. Ensure remedial measures area properly implemented. | Amend working methods to prevent recurrence of non-conformity. Rectify damage and undertake additional action necessary. |

Table 7.5: Summary of the Number of Retained, Transplanted and To-be-transplanted Trees in the Reporting Period

| Existing | | | | |
|---------------------|---------------|----------------------|--------------------|---------------------------|
| Contract | Retain (nos.) | Transplanted (nos.) | | To-be-transplanted (nos.) |
| | | Establishment Period | Maintenance Period | |
| 3302 | 9 | 0 | 0 | 0 |
| 3503 | 0 | 0 | 9 | 0 |
| 3508 ⁽¹⁾ | 24 | 12 | 0 | 0 |
| 3602 | 0 | 0 | 0 | 0 |
| 3801 | 12 | 0 | 5 ⁽²⁾ | 0 |
| Sub-total | 45 | 12 | 14 | 0 |
| Provisional | | | | |
| Contract | Retain (nos.) | Transplanted (nos.) | | To-be-transplanted (nos.) |
| 3508 ⁽¹⁾ | 50 | 0 | | 10 |
| Sub-total | 50 | 0 | | 10 |
| Grand Total | 97 | 26 | | 10 |

Notes:

- (1) As some of the site areas have been handed over to Contract 3508, Contractor of Contract 3508 is currently managing the trees that are located within their site area. Existing trees to be managed by Contract 3508 is subject to change after initial tree surveys for each batch of site areas have been conducted by the Contractor.
- (2) Three transplanted trees (CT1194, CT1794 and CT1795) were subsequently felled after transplantation. Please refer to **Table 7.6** for details.

Summary of the updated transplanted trees and photos are presented in **Table 7.6**.

Table 7.6: Summary of the Transplanted Trees Updated in the Reporting Period

| Tree ID | Transplant Date | Management Stage | Management Agency | Remarks | |
|---------|-----------------|---|--|--|---|
| CT276 | 3 May 2018 | <u>Long Term Management period</u> Jun 2019 – May 2028 | Southern Landside Petrol Filling Station | Establishment Period was completed. Next inspection will be conducted in February 2023. Photos of the last inspection in February 2022 can be referred to Table 7.7 of the Construction Phase Monthly EM&A Report No.74. | |
| CT1253 | 4 May 2018 | <u>Long Term Management period</u> Jun 2019 – May 2028 | Southern Landside Petrol Filling Station | | |
| T835 | 22 Jan 2020 | <u>Long Term Management period</u> Feb 2021 – Jan 2030 | AAHK | Establishment Period was completed. Next inspection will be conducted in February 2023. Photos of the last inspection in February 2022 can be referred to Table 7.7 of the Construction Phase Monthly EM&A Report No.74. | |
| T836 | 13 Dec 2019 | <u>Long Term Management period</u> Feb 2021 – Jan 2030 | AAHK | | |
| T838 | 22 Jan 2020 | <u>Long Term Management period</u> Feb 2021 – Jan 2030 | AAHK | | |
| T812 | 21 Dec 2020 | <u>Long Term Management period</u> Jan 2022 – Dec 2031 | AAHK | | |
| T814 | 20 Dec 2020 | <u>Long Term Management period</u> Jan 2022 – Dec 2031 | AAHK | Establishment Period was completed. Next inspection will be conducted in December 2022. | T1500 | 30 Jun 2021 | <u>Establishment period</u> 1 Jul 2021 – Jul 2022 | Contract 3508 | | |
| T1501 | 30 Jun 2021 | <u>Establishment period</u> 1 Jul 2021 – Jul 2022 | Contract 3508 | | |

| Tree ID | Transplant Date | Management Stage | Management Agency | Remarks |
|---------|-----------------|---|--|--|
| T1502 | 5 Jul 2021 | <u>Establishment period</u> 6 Jul 2021 – Jul 2022 | Contract 3508 | |
| T1503 | 6 Jul 2021 | <u>Establishment period</u> 7 Jul 2021 – Jul 2022 | Contract 3508 | |
| T1504 | 24 Jun 2021 | <u>Establishment period</u> 25 Jun 2021 – Jul 2022 | Contract 3508 | |
| CT1194 | 4 May 2018 | <u>Long Term Management period</u> Jun 2019 – May 2028 | Southern Landside Petrol Filling Station | Establishment Period was completed. Uprooted and collapsed due to Typhoon Higos on 18 August 2020. Tree removal was conducted as recommended by tree specialist of the contractor of Southern Landside Petrol Filling Station. |
| CT1794 | 3 May 2018 | <u>Long Term Management period</u> Jun 2019 – May 2028 | AsiaWorld-Expo | Establishment Period was completed. The tree within the land parcel was acquired by the government for construction of emergency hospital to handle COVID19 pandemic at AsiaWorld-Expo. The tree was felled in late 2020. |
| CT1795 | 3 May 2018 | <u>Long Term Management period</u> Jun 2019 – May 2028 | AsiaWorld-Expo | Establishment Period was completed. The tree within the land parcel was acquired by the government for construction of emergency hospital to handle COVID19 pandemic at AsiaWorld-Expo. The tree was felled in late 2020. |

7.3 Land Contamination Assessment

The Supplementary CAP was submitted to EPD pursuant to EP Condition 2.20. The CARs for Golf Course and T2 Emergency Power Supply Systems (EPSS) were submitted to EPD in accordance with EP Condition 1.9 and the Supplementary CAP in which no land contamination issues were identified. EPD has issued no further comment for aforesaid CARs. No leakage was found after the removal of underground fuel pipelines of T2 EPSS and all required additional photos have been submitted to EPD.

According to the approved supplementary CAP, there are 3 remaining locations where site re-appraisal / additional site investigation are proposed. Based on the latest construction information, there is no development programme for these locations at this stage. As such, the status of site re-appraisal/ additional site investigation shall be further updated upon latest development programme is available.

7.4 Audit of SkyPier High Speed Ferries

The Marine Travel Routes and Management Plan for High Speed Ferries of SkyPier (the SkyPier Plan) was submitted to the Advisory Council on the Environment for comment and subsequently submitted to and approved by EPD in November 2015 under EP Condition 2.10. The approved SkyPier Plan is available on the dedicated website of the Project. In the SkyPier Plan, AAHK has committed to implement the mitigation measure of requiring HSFs of SkyPier travelling between HKIA and Zhuhai / Macau to start diverting the route with associated speed control across the area, i.e. Speed Control Zone (SCZ), with high CWD abundance. The route diversion and speed restriction at the SCZ have been implemented since 28 December 2015.

Due to the COVID-19 pandemic, all SkyPier HSF services to/from Zhuhai and Macau have been suspended from 25 March 2020 until further notice. No ferry movement between HKIA SkyPier and Zhuhai and Macau was recorded in May 2022. Key audit findings for the SkyPier HSFs travelling to/from Zhuhai and Macau against the requirements of the SkyPier Plan during the reporting period are summarised in **Table 7.7**.

The daily movement of all SkyPier HSFs, including those not using the diverted route, in this reporting period (i.e., 3 daily movements) were within the maximum daily cap of 125 daily movements. Status of compliance with the annual daily average of 99 movements will be further reviewed in the Annual EM&A Report.

As updated by CLP Power, the construction works of the Hong Kong Offshore LNG Terminal Project may affect the route diversion operation of the SkyPier HSFs from Q1 to Q3 2022. The captains were informed on the issue and ET will continue to closely monitor the implementation of the SkyPier Plan in the period.

Table 7.7: Summary of Key Audit Findings against the SkyPier Plan

| Requirements in the SkyPier Plan | 1 to 30 June 2022 |
|--|-------------------|
| Total number of ferry movements recorded and audited for HSF to/from Zhuhai and Macau | 0 |
| Use diverted route and enter / leave SCZ through Gate Access Points | 0 deviation |
| A maximum daily cap of 125 movements for all SkyPier HSFs including those not using diverted route | 3 daily movement |

7.5 Audit of Construction and Associated Vessels

The updated MTRMP-CAV was approved by EPD on 31 May 2022 under EP Condition 2.9. The approved Plan is available on the dedicated website of the Project.

ET carried out the following actions during the reporting period:

- One skipper training session was held for contractor’s concerned skipper of relevant construction vessels to familiarize them with the predefined routes; general education on local cetaceans; guidelines for avoiding adverse water quality impact; the required environmental practices / measures while operating construction and associated vessels under the Project; and guidelines for operating vessels safely in the presence of CWDs. The list of all trained skippers was properly recorded and maintained by ET.
- Two skipper training sessions were held by contractors’ Environmental Officers. Competency tests were subsequently conducted with the trained skippers by ET. The list of all trained skippers was properly recorded and maintained by ET.
- In this reporting period, 1 skipper was trained by ET and 3 skippers were trained by contractor’s Environmental Officers. In total, 1863 skippers were trained from August 2016 to June 2022.
- The MSS automatically recorded deviation cases such as speeding, entering no entry zone and not travelling through the designated gate. ET conducted checking to ensure the MSS records deviation cases accurately.
- Deviations such as speeding in the works area, entered no entry zone, and entering from non-designated gates were identified. All the concerned contractors were reminded to comply with the requirements of the MTRMP-CAV during the bi-weekly Construction Traffic Control Centre (CTCC) audit.

- Three-month rolling programmes (one month record and three months forecast) for construction vessel activities were received from the contractors in order to help maintain the number of construction and associated vessels on site to a practicable minimal level.

7.6 Implementation of Dolphin Exclusion Zone

The DEZ Plan was submitted in accordance with EP Condition 3.1 (v) requirement and Section 10.3 of the Manual, and approved in April 2016 by EPD. The ET checked the contractors' dolphin sighting record and relevant records to audit the implementation of DEZ and there was no finding.

During the reporting period, there were no dolphin sightings within the DEZ.

7.7 Status of Submissions under Environmental Permits

The current status of submissions under the EP up to the reporting period is presented in **Table 7.8**.

Table 7.8: Status of Submissions under Environmental Permit

| EP Condition | Submission | Status |
|--------------|--|----------------------------|
| 2.1 | Complaint Management Plan | Accepted / approved by EPD |
| 2.4 | Management Organizations | |
| 2.5 | Construction Works Schedule and Location Plans | |
| 2.7 | Marine Park Proposal | |
| 2.8 | Marine Ecology Conservation Plan | |

7.8 Compliance with Other Statutory Environmental Requirements

During the reporting period, environmental related licenses and permits required for the construction activities were checked. No non-compliance with environmental statutory requirements was recorded. The environmental licenses and permits which are valid in the reporting period are presented in **Appendix E**.

7.9 Analysis and Interpretation of Complaints, Notification of Summons and Status of Prosecutions

7.9.1 Complaints

Two complaints regarding dust issue at 3RS construction site were received on 28 June 2022 and a complaint on dust issue was received on 30 June 2022. The cases are under investigation and findings will be reported in the next Monthly EM&A Report.

7.9.2 Notifications of Summons or Status of Prosecution

Neither notification of summons nor prosecution was received during the reporting period.

7.9.3 Cumulative Statistics

Cumulative statistics on complaints, notifications of summons and status of prosecutions are summarised in **Appendix F**.

8 Future Key Issues and Other EIA & EM&A Issues

8.1 Construction Programme for the Coming Reporting Period

Key activities anticipated in the next reporting period for the Project will include the following:

Reclamation Works:

Contract 3206 Main Reclamation Works

- Seawall construction; and
- Backfilling works.

Airfield Works:

Contract 3302 Eastern Vehicular Tunnel Advance Works

- Construction of tunnel structure;
- Pipe and drainage diversion works;
- Excavation and lateral support systems installation; and
- Stockpiling.

Contract 3303 Third Runway and Associated Works

- Architectural, Builder's and Finishing works;
- Footing and utilities work;
- Box culvert construction;
- Operation of asphalt plant; and
- Cable laying and ducting works.

Contract 3305 Airfield Ground Lighting System

- Modification works.

Contract 3306 Observation Facility Control System Supporting Interim 2RS and 3RS

- Equipment installation.

Contract 3307 Fire Training Facility

- Architectural, Builder's and Finishing works;
- Drainage and utilities works; and
- Building construction.

Contract 3308 Foreign Object Debris Detection System

- Site acceptance test for foreign object debris detection sensor.

Contract 3310 North Runway Modification Works

- Seawall construction;
- Construction of columns, slabs and walls;
- Installation of pipe piles;
- Land-based ground improvement works; and
- Backfilling works.

Third Runway Concourse

Contract 3403 New Integrated Airport Centres Building and Civil Works

- Architectural, Builder's Work and Finishing works; and
- Defects and outstanding works.

Contract 3404 Integrated Airport Control System

- System maintenance.

Contract 3405 Third Runway Concourse Foundation and Substructure Works

- Bored piling;
- Structure works;
- Excavation; and
- Road formation.

Contract 3408 Third Runway Concourse and Apron Works

- Reinforced concrete works;
- Site setup works; and
- Excavation.

Terminal 2 Expansion:

Contract 3508 Terminal 2 Expansion Works

- Excavation and footing construction;
- Block wall construction;
- Drainage works;
- Bridge demolition;
- Piling works;
- Backfilling;
- Temporary road construction; and
- Architectural, Builder's Work and Finishing works.

Automated People Mover (APM) and Baggage Handling System (BHS):

Contract 3601 New Automated People Mover System (TRC Line)

- Guidebeam installation.

Contract 3602 Existing APM System Modification Works

- Erection of guide rail; and
- Concrete plinth and stitch construction.

Contract 3603 Baggage Handling System (BHS)

- BHS installation.

Construction Support (Facilities):

Contract 3721 Construction Support Infrastructure Works

- Laying of drainage pipes and water mains;
- Paving works; and
- Road works.

Contract 3723 Construction Support Facilities

- Clearance works; and
- E&M installation.

Airport Support Infrastructure:

Contract 3801 APM and BHS Tunnels on Existing Airport Island

- Excavation;
- Box jacking operation; and
- Backfilling.

Contract 3802 APM and BHS Tunnels and Related Works

- Installation of dewatering well; and
- Excavation and lateral supports.

Construction Support (Services / Licenses):

Contract 3901A Concrete Batching Facility

- Operation of concrete batching plant and material conveyor belt.

Contract 3901B Concrete Batching Facility

- Operation of concrete batching plant.

8.2 Key Environmental Issues for the Coming Reporting Period

The key environmental issues for the Project in the coming reporting period expected to be associated with the construction activities include:

- Generation of dust from construction works and stockpiles;
- Noise from operating equipment and machinery on-site;
- Generation of site surface runoffs and wastewater from activities on-site;
- DEZ monitoring for seawall construction;
- Implementation of MMWP for silt curtain deployment;
- Sorting, recycling, storage and disposal of general refuse and construction waste;
- Reuse of treated marine sediments from piling and excavation works;
- Management of chemicals and avoidance of oil spillage on-site; and
- Acoustic decoupling measures for equipment on marine vessels.

The implementation of required mitigation measures by the contractors will be monitored by the ET.

8.3 Monitoring Schedule for the Coming Reporting Period

A tentative schedule of the planned environmental monitoring work in the next reporting period is provided in **Appendix B**.

8.4 Review of the Key Assumptions Adopted in the EIA Report

With reference to Appendix E of the Manual, it is noted that the key assumptions adopted in approved EIA report for the construction phase are still valid and no major changes are involved. The environmental mitigation measures recommended in the approved EIA Report remain applicable and shall be implemented in undertaking construction works for the Project.

9 Conclusion and Recommendation

The key activities of the Project carried out in the reporting period are located in reclamation areas and existing airport island respectively. Works in the reclamation areas included seawall construction, filling and ground improvement works, together with runway, concourse and associated works. Land-based works on existing airport island involved mainly airfield works, Terminal 2 expansion works, modification and tunnel work for Automated People Mover (APM) and Baggage Handling System (BHS), and preparation work for utilities, with activities include road and drainage works, cable ducting, demolition, piling, and excavation works.

All the monitoring works for construction dust, construction noise, water quality, construction waste, landscape & visual, and CWD were conducted during the reporting period in accordance with the Manual.

Monitoring results of construction dust, construction noise, construction waste and CWD did not trigger the corresponding Action and Limit Levels during the reporting period.

The water quality monitoring results for all parameters, except DO and SS, obtained during the reporting period were within the corresponding Action and Limit Levels stipulated in the EM&A programme. Relevant investigation and follow-up actions will be conducted according to the EM&A programme if the corresponding Action and Limit Levels are triggered. For DO and SS, some of the testing results triggered the relevant Action Levels, and the corresponding investigations were conducted accordingly. The investigation findings concluded that the cases were not related to the Project. To conclude, the construction activities in the reporting period did not introduce adverse impact to all water quality sensitive receivers.

Weekly site inspections of the construction works were carried out by the ET to audit the implementation of proper environmental pollution control and mitigation measures for the Project. Bi-weekly site inspections were also conducted by the IEC. Site inspection findings were recorded in the site inspection checklists and provided to the contractors to follow up.

On the implementation of the SkyPier Plan, due to the COVID-19 pandemic, all SkyPier HSF services to/from Zhuhai and Macau have been suspended from 25 March 2020 until further notice. No HSF movement between HKIA SkyPier and Zhuhai and Macau was recorded during the reporting period. Therefore, no deviation was recorded in the HSF monitoring in the reporting period. The daily movements of all SkyPier HSFs in the reporting period, including those not using the diverted route, were in the range of 3 daily movements, which are within the maximum daily cap of 125 daily movements.

On the implementation of MTRMP-CAV, the MSS automatically recorded the deviation case such as speeding, entering no entry zone and not travelling through the designated gates. ET conducted checking to ensure the MSS records all deviation cases accurately. Trainings have been provided for the concerned skippers to facilitate them in familiarising with the requirements of the MTRMP-CAV. Deviations including speeding in the works area, entered no entry zone, and entry from non-designated gates were reviewed by ET. All the concerned captains were reminded by the contractor's CTCC representative to comply with the requirements of the MTRMP-CAV. The ET reminded contractors that all vessels shall avoid entering the no-entry zone, in particular the Brothers Marine Park and the Sha Chau & Lung Kwu Chau Marine Park. Three-month rolling programmes for construction vessel activities, which ensures the proposed vessels are necessary and minimal through good planning, were also received from contractors.

Appendix A. Environmental Mitigation Implementation Schedule (EMIS) for Construction Phase

Environmental Mitigation Implementation Schedule (EMIS) for Construction Phase

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|--|-----------|--------------|--|---|-----------------------------------|
| Air Quality Impact – Construction Phase | | | | | |
| 5.2.6.2 | 2.1 | - | Dust Control Measures <ul style="list-style-type: none"> Water spraying for 12 times a day or once every two hours for 24-hour working at all active works area. | Within construction site / Duration of the construction phase | I |
| 5.2.6.3 | 2.1 | - | <ul style="list-style-type: none"> Covering of at least 80% of the stockpiling area by impervious sheets. Water spraying of all dusty materials immediately prior to any loading transfer operation so as to keep the dusty material wet during material handling. | Within construction site / Duration of the construction phase | I |
| 5.2.6.4 | 2.1 | - | Dust control practices as stipulated in the Air Pollution Control (Construction Dust) Regulation should be adopted. These practices include: Good Site Management <ul style="list-style-type: none"> Good site management is important to help reducing potential air quality impact down to an acceptable level. As a general guide, the Contractor should maintain high standard of housekeeping to prevent emission of fugitive dust. Loading, unloading, handling and storage of raw materials, wastes or by-products should be carried out in a manner so as to minimise the release of visible dust emission. Any piles of materials accumulated on or around the work areas should be cleaned up regularly. Cleaning, repair and maintenance of all plant facilities within the work areas should be carried out in a manner minimising generation of fugitive dust emissions. The material should be handled properly to prevent fugitive dust emission before cleaning. | Within construction site / Duration of the construction phase | I |
| | | | Disturbed Parts of the Roads <ul style="list-style-type: none"> Each and every main temporary access should be paved with concrete, bituminous hardcore materials or metal plates and kept clear of dusty materials; or Unpaved parts of the road should be sprayed with water or a dust suppression chemical so as to keep the entire road surface wet. | Within construction site / Duration of the construction phase | I |
| | | | Exposed Earth <ul style="list-style-type: none"> Exposed earth should be properly treated by compaction, hydroseeding, vegetation planting or seating with latex, vinyl, bitumen within six months after the last construction activity on the site or part of the site where the exposed earth lies. | Within construction site / Duration of the construction phase | I |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|--|---|-----------------------------------|
| | | | <p>Loading, Unloading or Transfer of Dusty Materials</p> <ul style="list-style-type: none"> All dusty materials should be sprayed with water immediately prior to any loading or transfer operation so as to keep the dusty material wet. | Within construction site / Duration of the construction phase | |
| | | | <p>Debris Handling</p> <ul style="list-style-type: none"> Any debris should be covered entirely by impervious sheeting or stored in a debris collection area sheltered on the top and the three sides; and Before debris is dumped into a chute, water should be sprayed so that it remains wet when it is dumped. | Within construction site / Duration of the construction phase | |
| | | | <p>Transport of Dusty Materials</p> <ul style="list-style-type: none"> Vehicle used for transporting dusty materials/spoils should be covered with tarpaulin or similar material. The cover should extend over the edges of the sides and tailboards. | Within construction site / Duration of the construction phase | |
| | | | <p>Wheel washing</p> <ul style="list-style-type: none"> Vehicle wheel washing facilities should be provided at each construction site exit. Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels. | Within construction site / Duration of the construction phase | |
| | | | <p>Use of vehicles</p> <ul style="list-style-type: none"> The speed of the trucks within the site should be controlled to about 10km/hour in order to reduce adverse dust impacts and secure the safe movement around the site; Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels; and Where a vehicle leaving the construction site is carrying a load of dusty materials, the load should be covered entirely by clean impervious sheeting to ensure that the dusty materials do not leak from the vehicle. | Within construction site / Duration of the construction phase | |
| | | | <p>Site hoarding</p> <ul style="list-style-type: none"> Where a site boundary adjoins a road, street, service lane or other area accessible to the public, hoarding of not less than 2.4m high from ground level should be provided along the entire length of that portion of the site boundary except for a site entrance or exit. | Within construction site / Duration of the construction phase | |
| 5.2.6.5 | 2.1 | - | <p>Best Practices for Concrete Batching Plant</p> <p>The relevant best practices for dust control as stipulated in the Guidance Note on the Best Practicable Means for Cement Works (Concrete Batching Plant) BPM 3/2 as well as in the future Specified Process licence should be adopted. The best practices are recommended to be applied to both the land based and floating concrete batching plants. Best practices include:</p> <p>Cement and other dusty materials</p> | Within Concrete Batching Plant / Duration of the construction phase | |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|--|--|-----------------------------------|
| | | | <ul style="list-style-type: none"> ▪ The loading, unloading, handling, transfer or storage of cement, pulverised fuel ash (PFA) and/or other equally dusty materials shall be carried in a totally enclosed system acceptable to EPD. All dust-laden air or waste gas generated by the process operations shall be properly extracted and vented to fabric filtering system to meet the required emission limit; ▪ Cement, PFA and/or other equally dusty materials shall be stored in storage silo fitted with audible high-level alarms to warn of over-filling. The high-level alarm indicators shall be interlocked with the material filling line such that in the event of the silo approaching an overfilling condition, an audible alarm will operate, and after 1 minute or less the material filling line will be closed; ▪ Vents of all silos shall be fitted with fabric filtering system to meet the required emission limit; ▪ Vents of cement/PFA weighing scale shall be fitted with fabric filtering system to meet the required emission limit; and ▪ Seating of pressure relief valves of all silos shall be checked, and the valves re-seated if necessary, before each delivery. | | |
| | | | <p>Other raw materials</p> <ul style="list-style-type: none"> ▪ The loading, unloading, handling, transfer or storage of other raw materials which may generate airborne dust emissions such as crushed rock, sand, stone aggregate, shall be carried out in such a manner to prevent or minimize dust emissions; ▪ The materials shall be adequately wetted prior to and during the loading, unloading and handling operations. Manual or automatic water spraying system shall be provided at all unloading areas, stockpiles and material discharge points; ▪ All receiving hoppers for unloading relevant materials shall be enclosed on three sides up to 3 m above the unloading point. In no case shall these hoppers be used as the material storage devices; ▪ The belt conveyor for handling materials shall be enclosed on top and two sides with a metal board at the bottom to eliminate any dust emission due to wind-whipping effect. Other type of enclosure will also be accepted by EPD if it can be demonstrated that the proposed enclosure can achieve same performance; ▪ All conveyor transfer points shall be totally enclosed. Openings for the passage of conveyors shall be fitted with adequate flexible seals; ▪ Scrapers shall be provided at the turning points of all conveyors to remove dust adhered to the belt surface; ▪ Conveyors discharged to stockpiles of relevant materials shall be arranged to minimize free fall as far as practicable. All free falling transfer points from conveyors to stockpiles shall be enclosed with chute(s) and water sprayed; ▪ Aggregates with a nominal size less than or equal to 5 mm should be stored in totally enclosed structure such as storage bin and should not be handled in open area. Where there is sufficient buffer area surrounding the concrete batching plant, ground stockpiling may be used; | <p>Within Concrete Batching Plant / Duration of the construction phase</p> | <p>I</p> |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|---|---|-----------------------------------|
| | | | <ul style="list-style-type: none"> ▪ The stockpile shall be enclosed at least on top and three sides and with flexible curtain to cover the entrance side; ▪ Aggregates with a nominal size greater than 5 mm should preferably be stored in a totally enclosed structure. If open stockpiling is used, the stockpile shall be enclosed on three sides with the enclosure wall sufficiently higher than the top of the stockpile to prevent wind whipping; and ▪ The opening between the storage bin and weighing scale of the materials shall be fully enclosed. | | |
| | | | <p>Loading of materials for batching</p> <ul style="list-style-type: none"> ▪ Concrete truck shall be loaded in such a way as to minimise airborne dust emissions. The following control measures shall be implemented: <ul style="list-style-type: none"> (a) Pre-mixing the materials in a totally enclosed concrete mixer before loading the materials into the concrete truck is recommended. All dust-laden air generated by the pre-mixing process as well as the loading process shall be totally vented to fabric filtering system to meet the required emission limit; and (b) If truck mixing batching or other types of batching method is used, effective dust control measures acceptable to EPD shall be adopted. The dust control measures must have been demonstrated to EPD that they are capable to collect and vent all dust-laden air generated by the material loading/mixing to dust arrestment plant to meet the required emission limit. ▪ The loading bay shall be totally enclosed during the loading process. | Within Concrete Batching Plant / Duration of the construction phase | |
| | | | <p>Vehicles</p> <ul style="list-style-type: none"> ▪ All practicable measures shall be taken to prevent or minimize the dust emission caused by vehicle movement; and ▪ All access and route roads within the premises shall be paved and adequately wetted. | Within Concrete Batching Plant / Duration of the construction phase | |
| | | | <p>Housekeeping</p> <ul style="list-style-type: none"> ▪ A high standard of housekeeping shall be maintained. All spillages or deposits of materials on ground, support structures or roofs shall be cleaned up promptly by a cleaning method acceptable to EPD. Any dumping of materials at open area shall be prohibited. | Within Concrete Batching Plant / Duration of the construction phase | |
| 5.2.6.6 | 2.1 | - | <p>Best Practices for Asphaltic Concrete Plant</p> <p>The relevant best practices for dust control as stipulated in the Guidance Note on the Best Practicable Means for Tar and Bitumen Works (Asphaltic Concrete Plant) BPM 15 (94) as well as in the future Specified Process licence should be adopted. These include:</p> <p>Design of Chimney</p> <ul style="list-style-type: none"> ▪ The chimney shall not be less than 3 metres plus the building height or 8 metres above ground level, whichever is the greater; ▪ The efflux velocity of gases from the main chimney shall not be less than 12 m/s at full load condition; | Within Concrete Batching Plant / Duration of the construction phase | |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|--|--|-----------------------------------|
| | | | <ul style="list-style-type: none"> ▪ The flue gas exit temperature shall not be less than the acid dew point; and ▪ Release of the chimney shall be directed vertically upwards and not be restricted or deflected. | | |
| | | | <p>Cold feed side</p> <ul style="list-style-type: none"> ▪ The aggregates with a nominal size less than or equal to 5 mm shall be stored in totally enclosed structure such as storage bin and shall not be handled in open area; ▪ Where there is sufficient buffer area surrounding the plant, ground stockpiling may be used. The stockpile shall be enclosed at least on top and three sides and with flexible curtain to cover the entrance side. If these aggregates are stored above the feeding hopper, they shall be enclosed at least on top and three sides and be wetted on the surface to prevent wind-whipping; ▪ The aggregates with a nominal size greater than 5 mm should preferably be stored in totally enclosed structure. Aggregates stockpile that is above the feeding hopper shall be enclosed at least on top and three sides. If open stockpiling is used, the stockpiles shall be enclosed on three sides with the enclosure wall sufficiently higher than the top of the stockpile to prevent wind whipping; ▪ Belt conveyors shall be enclosed on top and two sides and provided with a metal board at the bottom to eliminate any dust emission due to the wind-whipping effect. Other type of enclosure will also be accepted by EPD if it can be demonstrated that the proposed enclosure can be achieve the same performance; ▪ Scrapers shall be provided at the turning points of all belt conveyors inside the chute of the transfer points to remove dust adhered to the belt surface; ▪ All conveyor transfer points shall be totally enclosed. Openings for the passages of conveyors shall be fitted with adequate flexible seals; and ▪ All materials returned from dust collection system shall be transferred in enclosed system and shall be stored inside bins or enclosures. | <p>Within Concrete Batching Plant / Duration of the construction phase</p> | |
| | | | <p>Hot feed side</p> <ul style="list-style-type: none"> ▪ The inlet and outlet of the rotary dryer shall be enclosed and ducted to a dust extraction and collection system such as a fabric filter. The particulate and gaseous concentration at the exhaust outlet of the dust collector shall not exceed the required limiting values; ▪ The bucket elevator shall be totally enclosed and the air be extracted and ducted to a dust collection system to meet the required particulates limiting value; ▪ All vibratory screens shall be totally enclosed and dust tight with close-fitted access inspection opening. Gaskets shall be installed to seal off any cracks and edges of any inspection openings; ▪ Chutes for carrying hot material shall be rigid and preferably fitted with abrasion resistant plate inside. They shall be inspected daily for leakages; ▪ All hot bins shall be totally enclosed and dust tight with close-fitted access inspection opening. Gaskets shall be installed to seal off any cracks and edges of any inspection openings. The air shall be extracted and ducted to a dust collection system to meet the required particulates limiting value; and | <p>Within Concrete Batching Plant / Duration of the construction phase</p> | |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|---|---|---|
| | | | <ul style="list-style-type: none"> Appropriate control measures shall be adopted in order to meet the required bitumen emission limit as well as the ambient odour level (2 odour units). | | |
| | | | <p>Material transportation</p> <ul style="list-style-type: none"> The loading, unloading, handling, transfer or storage of other raw materials which may generate airborne dust emissions such as crushed rocks, sands, stone aggregates, reject fines, shall be carried out in such a manner as to minimize dust emissions; Roadways from the entrance of the plant to the product loading points and/or any other working areas where there are regular movements of vehicles shall be paved or hard surfaced; and Haul roads inside the Works shall be adequately wetted with water and/or chemical suppressants by water trucks or water sprayers. | Within Concrete Batching Plant / Duration of the construction phase | |
| | | | <p>Control of emissions from bitumen decanting</p> <ul style="list-style-type: none"> The heating temperature of the particular bitumen type and grade shall not exceed the corresponding temperature limit of the same type listed in Appendix 1 of the Guidance Note; Tamper-free high temperature cut-off device shall be provided to shut off the fuel supply or electricity in case the upper limit for bitumen temperature is reached; Proper chimney for the discharge of bitumen fumes shall be provided at high level; The emission of bitumen fumes shall not exceed the required emission limit; and The air-to-fuel ratio shall be properly controlled to allow complete combustion of the fuel. The fuel burners, if any, shall be maintained properly and free from carbon deposits in the burner nozzles. | Within Concrete Batching Plant / Duration of the construction phase | |
| | | | <p>Liquid fuel</p> <ul style="list-style-type: none"> The receipt, handling and storage of liquid fuel shall be carried out so as to prevent the release of emissions of organic vapours and/or other noxious and offensive emissions to the air. | Within Concrete Batching Plant / Duration of the construction phase | |
| | | | <p>Housekeeping</p> <ul style="list-style-type: none"> A high standard of housekeeping shall be maintained. Waste material, spillage and scattered piles gathered beneath belt conveyors, inside and around enclosures shall be cleared frequently. The minimum clearing frequency is on a weekly basis. | Within Concrete Batching Plant / Duration of the construction phase | |
| 5.2.6.7 | 2.1 | - | <p>Best Practices for Rock Crushing Plants</p> <p>The relevant best practices for dust control as stipulated in the Guidance Note on the Best Practicable Means for Mineral Works (Stone Crushing Plant) BPM 11/1 (95) as well as in the future Specified Process licence should be adopted. These include:</p> <p>Crushers</p> | Within Concrete Batching Plant / Duration of the construction phase | N/A as there was no rock crushing plant at this stage |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|---|---|---|
| | | | <ul style="list-style-type: none"> ▪ The outlet of all primary crushers, and both inlet and outlet of all secondary and tertiary crushers, if not installed inside a reasonably dust tight housing, shall be enclosed and ducted to a dust extraction and collection system such as a fabric filter; ▪ The inlet hopper of the primary crushers shall be enclosed on top and 3 sides to contain the emissions during dumping of rocks from trucks. The rock while still on the trucks shall be wetted before dumping; ▪ Water sprayers shall be installed and operated in strategic locations at the feeding inlet of crushers; and ▪ Crusher enclosures shall be rigid and be fitted with self-closing doors and close-fitting entrances and exits. Where conveyors pass through the crusher enclosures, flexible covers shall be installed at entries and exits of the conveyors to the enclosure. | | |
| | | | <p>Vibratory screens and grizzlies</p> <ul style="list-style-type: none"> ▪ All vibratory screens shall be totally enclosed in a housing. Screenhouses shall be rigid and reasonably dust tight with self-closing doors or close-fitted entrances and exits for access. Where conveyors pass through the screenhouse, flexible covers shall be installed at entries and exits of the conveyors to the housing. Where containment of dust within the screenhouse structure is not successful then a dust extraction and collection system shall be provided; and ▪ All grizzlies shall be enclosed on top and 3 sides and sufficient water sprayers shall be installed at their feeding and outlet areas. | Within Concrete Batching Plant / Duration of the construction phase | N/A as there was no rock crushing plant at this stage |
| | | | <p>Belt conveyors</p> <ul style="list-style-type: none"> ▪ Except for those conveyors which are placed within a totally enclosed structure such as a screenhouse or those erected at the ground level, all conveyors shall be totally enclosed with windshield on top and 2 sides; ▪ Effective belt scraper such as the pre-cleaner blades made by hard wearing materials and provided with pneumatic tensioner, or equivalent device, shall be installed at the head pulley of designated conveyor as required to dislodge fine dust particles that may adhere to the belt surface and to reduce carry-back of fine materials on the return belt. Bottom plates shall also be provided for the conveyor unless it has been demonstrated that the corresponding belt scraper is effective and well maintained to prevent falling material from the return belt; and <p>Except for those transfer points which are placed within a totally enclosed structure such as a screenhouse, all transfer points to and from conveyors shall be enclosed. Where containment of dust within the enclosure is not successful, then water sprayers shall be provided. Openings for any enclosed structure for the passage of conveyors shall be fitted with flexible seals.</p> | Within Concrete Batching Plant / Duration of the construction phase | N/A as there was no rock crushing plant at this stage |
| | | | <p>Storage piles and bins</p> <ul style="list-style-type: none"> ▪ Where practicable, free falling transfer points from conveyors to stockpiles shall be fitted with flexible curtains or be enclosed with chutes designed to minimize the drop height. Water sprays shall also be used where required. | Within Concrete Batching Plant / Duration of the construction phase | N/A as there was no rock crushing plant at this stage |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |

| 8.8.1.5 | 5.1 | - | <p>Construction of New Stormwater Outfalls and Modifications to Existing Outfalls</p> <ul style="list-style-type: none"> During operation of the temporary drainage channel, runoff control measures such as bunding or silt fence shall be provided on both sides of the channel to prevent accumulation and release of SS via the temporary channel. Measures should also be taken to minimise the ingress of site drainage into the culvert excavations. | Within construction site / Duration of the construction phase | I |
| 8.8.1.6 8.8.1.7 | 5.1 | 2.27 | <p>Piling Activities for Construction of New Runway Approach Lights and HKIAAA Marker Beacons</p> <p>Silt curtains shall be deployed around the piling activities to completely enclose the piling works and care should be taken to avoid spillage of excavated materials into the surrounding marine environment.</p> | Within construction site / Duration of the construction phase | <p>C – For approach lights</p> <p>N/A for marker beacons as HKIAAA Marker Beacons would be replaced by buoys</p> |
| | | | <p><u>For construction of the eastern approach lights at the CMPs</u></p> <ul style="list-style-type: none"> Ground improvement via DCM using a close-spaced layout shall be completed prior to commencement of piling works; Steel casings shall be installed to enclose the excavation area prior to commencement of excavation; The excavated materials shall be removed using a closed grab within the steel casings; No discharge of the cement mixed materials into the marine environment will be allowed; and Excavated materials shall be treated and reused on-site. | | <p>C – Completed in Oct 2021</p> |
| 8.8.1.8 | 5.1 | - | <p>Construction of Site Runoff and Drainage</p> <p>The site practices outlined in ProPECC Note PN 1/94 should be followed as far as practicable in order to minimise surface runoff and the chance of erosion. The following measures are recommended:</p> | Within construction site / Duration of the construction phase | |
| | | | <ul style="list-style-type: none"> Install perimeter cut-off drains to direct off-site water around the site and implement internal drainage, erosion and sedimentation control facilities. Channels, earth bunds or sandbag barriers should be provided on site to direct storm water to silt removal facilities. The design of the temporary on-site drainage system should be undertaken by the Contractors prior to the commencement of construction (for works areas located on the existing Airport island) or as soon as the new land is completed (for works areas located on the new landform); | | I |
| | | | <ul style="list-style-type: none"> Sand/silt removal facilities such as sand/silt traps and sediment basins should be provided to remove sand/silt particles from runoff to meet the requirements of the TM-DSS standards under the WPCO. The design of efficient silt removal facilities should make reference to the guidelines in Appendix A1 of ProPECC Note PN 1/94. Sizes may vary depending upon the flow rate. The detailed design of the sand/silt traps should be undertaken by the Contractors prior to the commencement of construction; | | I |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|---|---|-----------------------------------|
| | | | <ul style="list-style-type: none"> ▪ All drainage facilities and erosion and sediment control structures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly during rainstorms. Deposited silt and grit should be regularly removed, at the onset of and after each rainstorm to ensure that these facilities are functioning properly; | | |
| | | | <ul style="list-style-type: none"> ▪ Measures should be taken to minimize the ingress of site drainage into excavations. If excavation of trenches in wet periods is necessary, they should be dug and backfilled in short sections wherever practicable. Water pumped out from foundation excavations should be discharged into storm drains via silt removal facilities; | | |
| | | | <ul style="list-style-type: none"> ▪ In the event that contaminated groundwater is identified at excavation areas, this should be treated on-site using a suitable wastewater treatment process. The effluent should be treated according to the requirements of the TM-DSS standards under the WPCO prior to discharge to foul sewers or collected for proper disposal off-site. No direct discharge of contaminated groundwater is permitted; and | | |
| | | | <ul style="list-style-type: none"> ▪ All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited by them on roads. An adequately designed and sited wheel washing facility should be provided at construction site exits. Wash-water should have sand and silt settled out and removed regularly to ensure the continued efficiency of the process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains. All washwater should be treated according to the requirements of the TM-DSS standards under the WPCO prior to discharge. | | |
| | | | <ul style="list-style-type: none"> ▪ Open stockpiles of construction materials or construction wastes on-site should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the construction materials, soil, silt or debris from washing away into the drainage system; | | |
| | | | <ul style="list-style-type: none"> ▪ Manholes (including newly constructed ones) should be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and to prevent stormwater runoff being directed into foul sewers; and | | |
| | | | <ul style="list-style-type: none"> ▪ Precautionary measures should be taken at any time of the year when rainstorms are likely. Actions to be taken when a rainstorm is imminent or forecasted are summarized in Appendix A2 of ProPECC Note PN 1/94. This includes actions to be taken during and/or after rainstorms. Particular attention should be paid to the control of silty surface runoff during storm events. | | |
| 8.8.1.9 | 5.1 | - | <p>Sewage Effluent from Construction Workforce</p> <ul style="list-style-type: none"> ▪ Temporary sanitary facilities, such as portable chemical toilets, should be employed on-site where necessary to handle sewage from the workforce. A licensed contractor should be employed to provide appropriate and adequate portable toilets and be responsible for appropriate disposal and maintenance. | Within construction site / During construction phase | |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|--|-----------|--------------|--|---|-----------------------------------|
| 8.8.1.10 8.8.1.11 | 5.1 | | <p>General Construction Activities</p> <ul style="list-style-type: none"> Construction solid waste, debris and refuse generated on-site should be collected, handled and disposed of properly to avoid entering any nearby storm water drain. Stockpiles of cement and other construction materials should be kept covered when not being used; and Oils and fuels should only be stored in designated areas which have pollution prevention facilities. To prevent spillage of fuels and solvents to any nearby storm water drain, all fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank. The bund should be drained of rainwater after a rain event. | Within construction site / During construction phase | I |
| 8.8.1.12 8.8.1.13 | 5.1 | 2.28 | <p>Drilling Activities for the Submarine Aviation Fuel Pipelines</p> <p>To prevent potential water quality impacts at Sha Chau, the following measures shall be applied:</p> <ul style="list-style-type: none"> A 'zero-discharge' policy shall be applied for all activities to be conducted at Sha Chau; No bulk storage of chemicals shall be permitted; and A containment pit shall be constructed around the drill holes. This containment pit shall be lined with impermeable lining and bunded on the outside to prevent inflow from off-site areas. | Within construction site / During construction phase | C – Completed in Jan 2019 |
| | | | <p>At the airport island side of the drilling works, the following measures shall be applied for treatment of wastewater:</p> <ul style="list-style-type: none"> During pipe cleaning, appropriate desilting or sedimentation device should be provided on site for treatment before discharge. The Contractor should ensure discharge water from the sedimentation tank meet the WPCO/TM requirements before discharge; and Drilling fluid used in drilling activities should be reconditioned and reused as far as possible. Temporary enclosed storage locations should be provided on-site for any unused chemicals that needs to be transported away after all the related construction activities are completed. The requirements in ProPECC Note PN 1/94 should be adhered to in the handling and disposal of bentonite slurries. | Within construction site / During construction phase | C – Completed in Jan 2019 |
| Waste Management Implication – Construction Phase | | | | | |
| 10.5.1.1 | 7.1 | - | <p>Opportunities to minimise waste generation and maximise the reuse of waste materials generated by the project have been incorporated where possible into the planning, design and construction stages, and the following measures have been recommended:</p> <ul style="list-style-type: none"> The relevant construction methods (particularly for the tunnel works) and construction programme have been carefully planned and developed to minimise the extent of excavation and to maximise the on-site reuse of inert C&D materials generated by the project as far as practicable. Temporary stockpiling areas will also be provided to facilitate on-site reuse of inert C&D materials; Priority should be given to collect and reuse suitable inert C&D materials generated from other concurrent projects and the Government's PFRF as fill materials for the proposed land formation works; | Project Site Area / During design and construction phase | I |
| | | | | | I |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|---|---|-----------------------------------|
| | | | <ul style="list-style-type: none"> ▪ Only non-dredged ground improvement methods should be adopted in order to completely avoid the need for dredging and disposal of marine sediment for the proposed land formation work; | | |
| | | | <ul style="list-style-type: none"> ▪ Excavation work for constructing the APM tunnels, BHS tunnels and airside tunnels will not be down to the CMPs beneath the fill materials in order to avoid excavating any sediments; and | | |
| | | | <ul style="list-style-type: none"> ▪ For the marine sediments expected to be excavated from the piling works of TRC, APM & BHS tunnels, airside tunnels and other facilities on the proposed land formation area, piling work of marine sections of the approach lights and HKIAAAA beacons, basement works for some of T2 expansion area and excavation works for the proposed APM depot should be treated and reused on-site as backfilling materials, although required treatment level / detail and the specific re-use mode are under development. | | |
| 10.5.1.1 | 7.1 | - | <p>The following good site practices should be performed during the construction activities include:</p> <ul style="list-style-type: none"> ▪ Nomination of an approved person, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site; ▪ Training of site personnel in proper waste management and chemical waste handling procedures; ▪ Provision of sufficient waste disposal points and regular collection for disposal; ▪ Appropriate measures to minimise windblown litter and dust during transportation of waste by either covering trucks by tarpaulin/ similar material or by transporting wastes in enclosed containers. The cover should be extended over the edges of the sides and tailboards; ▪ Stockpiles of C&D materials should be kept wet or covered by impervious sheets to avoid wind-blown dust; ▪ All dusty materials including C&D materials should be sprayed with water immediately prior to any loading transfer operation so as to keep the dusty material wet during material handling at the barging points/ stockpile areas; ▪ C&D materials to be delivered to and from the project site by barges or by trucks should be kept wet or covered to avoid wind-blown dust; ▪ The speed of the trucks including dump trucks carrying C&D or waste materials within the site should be controlled to about 10 km/hour in order to reduce the adverse dust impact and secure the safe movement around the site; and ▪ To avoid or minimise dust emission during transport of C&D or waste materials within the site, each and every main temporary access should be paved with concrete, bituminous hardcore materials or metal plates and kept clear of dusty materials. Unpaved parts of the road should be sprayed with water or a dust suppression chemical so as to keep the entire road surface wet. | Project Site Area / Construction Phase | |
| 10.5.1.3 | 7.1 | - | <p>The following practices should be performed to achieve waste reduction include:</p> <ul style="list-style-type: none"> ▪ Use of steel or aluminium formworks and falseworks for temporary works as far as practicable; | Project Site Area / Construction Phase | |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|-----------|-----------|--------------|---|---|-----------------------------------|
| | | | <ul style="list-style-type: none"> ▪ Adoption of repetitive design to allow reuse of formworks as far as practicable; ▪ Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal; ▪ Encourage collection of aluminium cans, PET bottles and paper by providing separate labelled bins to enable these wastes to be segregated from other general refuse generated by the work force; ▪ Any unused chemicals or those with remaining functional capacity should be collected for reused as far as practicable; ▪ Proper storage and site practices to minimise the potential for damage or contamination of construction materials; and ▪ Plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste. | | |
| 10.5.1.5 | 7.1 | | Inert and non-inert C&D materials should be handled and stored separately to avoid mixing the two types of materials. | Project Site Area / Construction Phase | I |
| 10.5.1.5 | 7.1 | - | Any recyclable materials should be segregated from the non-inert C&D materials for collection by reputable licensed recyclers whereas the non-recyclable waste materials should be disposed of at the designated landfill site by a reputable licensed waste collector. | Project Site Area / Construction Phase | I |
| 10.5.1.6 | 7.1 | - | A trip-ticket system promulgated shall be developed in order to monitor the off-site delivery of surplus inert C&D materials that could not be reused on-site for the proposed land formation work at the PFRF and to control fly tipping. | Project Site Area / Construction Phase | I |
| 10.5.1.6 | 7.1 | 2.32 | The Contractor should prepare and implement a Waste Management Plan detailing various waste arising and waste management practices. | Construction Phase | I |
| 10.5.1.16 | 7.1 | - | <p>The following mitigation measures are recommended during excavation and treatment of the sediments:</p> <ul style="list-style-type: none"> ▪ On-site remediation should be carried out in an enclosed area in order to minimise odour/dust emissions; ▪ The loading, unloading, handling, transfer or storage of treated and untreated sediment should be carried out in such a manner to prevent or minimise dust emissions; ▪ All practical measures, including but not limited to speed control for vehicles, should be taken to minimise dust emission; ▪ Good housekeeping should be maintained at all times at the sediment treatment facility and storage area; ▪ Treated and untreated sediment should be clearly separated and stored separately; and ▪ Surface runoff from the enclosed area should be properly collected and stored separately, and then properly treated to levels in compliance with the relevant effluent standards as required by the Water Pollution Control Ordinance before final discharge. | Project Site Area / Construction Phase | I I I I I |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|--|-----------|--------------|--|---|--|
| 10.5.1.18 | 7.1 | - | <p>The marine sediments to be removed from the cable field joint area would be disposed of at the designated disposal sites to be allocated by the MFC. The following mitigation measures should be strictly followed to minimise potential impacts on water quality during transportation of the sediments requiring Type 1 disposal:</p> <ul style="list-style-type: none"> Bottom opening of barges shall be fitted with tight fitting seals to prevent leakage of material; Monitoring of the barge loading shall be conducted to ensure that loss of material does not take place during transportation. Transport barges or vessels shall be equipped with automatic self-monitoring devices as specified by EPD; and Barges or hopper barges shall not be filled to a level that would cause the overflow of materials or sediment laden water during loading or transportation. | Project Site Area / Construction Phase | N/A – the field joint excavation works for the submarine cable diversion will no longer be conducted anymore |
| 10.5.1.19 | 7.1 | - | <p>Contractor should register with the EPD as a chemical waste producer and to follow the relevant guidelines. The following measures should be implemented:</p> <ul style="list-style-type: none"> Good quality containers compatible with the chemical wastes should be used; Incompatible chemicals should be stored separately; Appropriate labels must be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical waste, such as explosive, flammable, oxidizing, irritant, toxic, harmful, corrosive, etc.; and The contractor will use a licensed collector to transport and dispose of the chemical wastes at the approved Chemical Waste Treatment Centre or other licensed recycling facilities, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation. | Project Site Area / Construction Phase | I |
| 10.5.1.20 | 7.1 | - | <p>General refuse should be stored in enclosed bins or compaction units separated from inert C&D material. A reputable waste collector should be employed by the contractor to remove general refuse from the site for disposal at designated landfill sites. An enclosed and covered area should be provided to reduce the occurrence of 'windblown' light material.</p> | Project Site Area / Construction Phase | I |
| 10.5.1.21 | 7.1 | - | <p>The construction contractors will be required to regularly check and clean any refuse trapped or accumulated along the newly constructed seawall. Such refuse will then be stored and disposed of together with the general refuse.</p> | Project Site Area / Construction Phase | I |
| Land Contamination – Construction Phase | | | | | |
| 11.10.1.2 to 11.10.1.3 | 8.1 | 2.32 | <p>For areas inaccessible during site reconnaissance survey</p> <ul style="list-style-type: none"> Further site reconnaissance would be conducted once the areas are accessible in order to identify any land contamination concern for the areas. | Project Site Area inaccessible during site reconnaissance / Prior to Construction Phase | I |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|---|---|---|
| | | | <ul style="list-style-type: none"> ▪ Subject to further site reconnaissance findings, a supplementary Contamination Assessment Plan (CAP) for additional site investigation (SI) (if necessary) may be prepared and submitted to EPD for endorsement prior to the commencement of SI at these areas. ▪ After completion of SI, the Contamination Assessment Report (CAR) will be prepared and submitted to EPD for approval prior to start of the proposed construction works at the golf course, the underground and above-ground fuel storage tank areas, emergency power generation units, airside petrol filling station and fuel tank room. ▪ Should remediation be required, Remediation Action Plan (RAP) and Remediation Report (RR) will be prepared for EPD's approval prior to commencement of the proposed remediation and any construction works respectively. | | <p>C – Completed in Jan 2018</p> <p>I *(CAR for golf course and Terminal 2 emergency power supply system nos.1, 2, 3, 4 and 5 were submitted to EPD)</p> <p>N/A as no remediation was required.</p> |
| 11.8.1.2 | 8.1 | - | <p>If contaminated soil is identified, the following mitigation measures are for the excavation and transportation of contaminated materials (if any):</p> <ul style="list-style-type: none"> ▪ To minimize the incidents of construction workers coming in contact with any contaminated materials, bulk earth-moving excavation equipment should be employed; ▪ Contact with contaminated materials can be minimised by wearing appropriate clothing and personal protective equipment such as gloves and masks (especially when working directly with contaminated material), provision of washing facilities and prohibition of smoking and eating on site; ▪ Stockpiling of contaminated excavated materials on site should be avoided as far as possible; ▪ The use of any contaminated soil for landscaping purpose should be avoided unless pre-treatment was carried out; ▪ Vehicles containing any excavated materials should be suitably covered to reduce dust emissions and/or release of contaminated wastewater; ▪ Truck bodies and tailgates should be sealed to prevent any discharge; ▪ Only licensed waste haulers should be used to collect and transport contaminated material to treatment/disposal site and should be equipped with tracking system to avoid fly tipping; ▪ Speed control for trucks carrying contaminated materials should be exercised. 8km/h is the recommended speed limit; ▪ Strictly observe all relevant regulations in relation to waste handling, such as Waste Disposal Ordinance (Cap 354), Waste Disposal (Chemical Waste) (General) Regulation (Cap 354) and obtain all necessary permits where required; and ▪ Maintain records of waste generation and disposal quantities and disposal arrangements. | Project Site Area / Construction Phase | N/A as no contaminated soil was found. |

DA: Depth-Averaged

Calm: Small or no wave; Moderate: Between calm and rough; Rough : White capped or rougher

Value exceeding Action Level is underlined; Value exceeding Limit Level is bolded and underlined

Note: The Action and Limit Level of turbidity can be referred to Table 4.2 of the monthly EM&A report.

Note: The Action and Limit Level of turbidity can be referred to Table 4.2 of the monthly EM&A report.

Note: The Action and Limit Level of suspended solids can be referred to Table 4.2 of the monthly EM&A report.

Note: The Action and Limit Level of suspended solids can be referred to Table 4.2 of the monthly EM&A report. Major site activities carried out during the reporting period are summarized in Section 1.4 of the monthly EM&A report. Weather conditions during monitoring are presented in the data tables above. QA/QC requirements as stipulated in the EM&A Manual were carried out during measurement.

Abbreviations: STG# = Sighting Number; GP SZ = Group Size; BEAU = Beaufort Sea State; PSD = Perpendicular Distance (in metres); N/A = Not Applicable; DEC LAT = Latitude (WGS84 in Decimal), DEC LON = Longitude (WGS84 in Decimal); BOAT ASSOC. = Fishing Boat Association; P/S = Primary Transect / Secondary Transect

Notes:

CWD monitoring survey data of the two preceding survey months are presented for reference only. No relevant figure or text will be mentioned in this monthly EM&A report.

Sighting data of finless porpoise (FP) are presented for reference only. No relevant figure or text will be mentioned in the monthly EM&A report. All FP sightings are excluded in calculation.

Calculation of the encounter rates STG and ANI in the whole survey area (NEL, NWL, AW, WL, SWL):

A total of 420.851 km of survey effort was collected under Beaufort Sea State 3 or below with favourable visibility; total no. of 16 on-effort sightings and total number of 68 dolphins from on-effort sightings were collected under such condition. Calculation of the encounter rates in June 2022 are shown as below:

Encounter Rate by Number of Dolphin Sightings (STG) in June 2022

$$STG = \frac{16}{420.851} \times 100 = 3.80$$

Encounter Rate by Number of Dolphins (ANI) in June 2022

$$ANI = \frac{68}{420.851} \times 100 = 16.16$$

Calculation of the running quarterly STG and ANI in the whole survey area (NEL, NWL, AW, WL, SWL):

A total of 1284.242 km of survey effort was collected under Beaufort Sea State 3 or below with favourable visibility; total no. of 45 on-effort sightings and total number of 166 dolphins from on-effort sightings were collected under such condition. Calculation of the running quarterly encounter rates are shown as below:

Running Quarterly Encounter Rate by Number of Dolphin Sightings (STG)

$$STG = \frac{45}{1284.242} \times 100 = 3.50$$

Running Quarterly Encounter Rate by Number of Dolphins (ANI)

$$ANI = \frac{166}{1284.242} \times 100 = 12.93$$

Appendix D. Calibration Certificates

REPORT OF EQUIPMENT PERFORMANCE CHECK/ CALIBRATION

Test Report No. : R-BB060021
Date of Issue : 13 June 2022
Page No. : 1 of 2

PART A - CUSTOMER INFORMATION

Enovative Environmental Service Ltd.
 Flat 2207, Yu Fun House Yu Chui Court, Shatin
 New Territories (HK) Hong Kong
 Attn :

PART B - SAMPLE INFORMATION

Name of Equipment : YSI ProDSS (Multi-Parameters)
 Manufacturer : YSI (a xylem brand)
 Serial Number : 16H104233
 Date of Received : 10 June 2022
 Date of Calibration : 10 June 2022
 Date of Next Calibration : 09 September 2022

PART C - REFERENCE METHODS/ DOCUMENTS FOR THE CALIBRATION

| <u>Test Parameter</u> | <u>Reference Method</u> |
|-----------------------|---|
| Turbidity | APHA 21e 2130B |
| Dissolved oxygen | APHA 21e 4500 O |
| pH value | APHA 21e 4500 H+ |
| Salinity | APHA 21e 2520B |
| Temperature | Section 6 of international Accreditation New Zealand Technical Guide no. 3 Second edition March 2008: Working Thermometer Calibration Procedure |
| Conductivity | APHA 21e 2510B |

PART D - CALIBRATION RESULT

(1) Turbidity

| EXPECTED READING (NTU) | DISPLAY READING (NTU) | TOLERANCE (%) | RESULT |
|------------------------|-----------------------|---------------|--------------|
| 0 | 0.03 | -- | Satisfactory |
| 10 | 9.98 | -0.2 | Satisfactory |
| 20 | 20.16 | 0.8 | Satisfactory |
| 100 | 107.6 | 7.6 | Satisfactory |
| 800 | 796 | -0.5 | Satisfactory |

Tolerance of Turbidity should be less than ± 10.0 (%)

(2) Dissolved oxygen

| EXPECTED READING (MG/L) | DISPLAY READING (MG/L) | TOLERANCE | RESULT |
|-------------------------|------------------------|-----------|--------------|
| 7.78 | 7.81 | 0.03 | Satisfactory |
| 4.72 | 4.92 | 0.20 | Satisfactory |
| 2.60 | 2.38 | -0.22 | Satisfactory |
| 0.09 | 0.30 | 0.21 | Satisfactory |

Tolerance of Dissolved oxygen should be less than ± 0.5 (mg/L)

(3) pH value

| TARGET (PH UNIT) | DISPLAY READING (PH UNIT) | TOLERANCE | RESULT |
|------------------|---------------------------|-----------|--------|
|------------------|---------------------------|-----------|--------|

REPORT OF EQUIPMENT PERFORMANCE CHECK/ CALIBRATION

Test Report No. : R-BB060021

Date of Issue : 13 June 2022

Page No. : 2 of 2

| TARGET (PH UNIT) | DISPLAY READING (PH UNIT) | TOLERANCE | RESULT |
|------------------|---------------------------|-----------|--------------|
| 4.00 | 3.96 | -0.04 | Satisfactory |
| 7.42 | 7.48 | 0.06 | Satisfactory |
| 10.01 | 9.95 | -0.06 | Satisfactory |

Tolerance of pH value should be less than ± 0.2 (pH unit)

(4) Salinity

| EXPECTED READING (G/L) | DISPLAY READING (G/L) | TOLERANCE (%) | RESULT |
|------------------------|-----------------------|---------------|--------------|
| 10 | 9.92 | -0.80 | Satisfactory |
| 20 | 20.20 | 1.00 | Satisfactory |
| 30 | 30.22 | 0.73 | Satisfactory |

Tolerance of Salinity should be less than ± 10.0 (%)

(5) Temperature

| READING OF REF. THERMOMETER (°C) | DISPLAY READING (°C) | TOLERANCE | RESULT |
|----------------------------------|----------------------|-----------|--------------|
| 10 | 10 | 0 | Satisfactory |
| 20 | 20 | 0 | Satisfactory |
| 40 | 40 | 0 | Satisfactory |

Tolerance of Temperature should be less than ± 2.0 (°C)

(6) Conductivity

| EXPECTED READING (MS/CM AT 25°C) | DISPLAY READING | TOLERANCE (%) | RESULT |
|----------------------------------|-----------------|---------------|--------------|
| 146.9 | 137.1 | -6.67 | Satisfactory |
| 1412 | 1328.2 | -5.93 | Satisfactory |
| 12890 | 12567.8 | -2.50 | Satisfactory |
| 58670 | 57574 | -1.87 | Satisfactory |
| 111900 | 109783 | -1.89 | Satisfactory |

Tolerance of Conductivity should be less than ± 10.0 (%)

Remark(s)

- The "Date of Next Calibration" is recommended according to best practice principals as practiced by QPT or quoted from relevant international standards.
- The results relate only to the calibrated equipment as received
- The performance of the equipment stated in this report is checked with independent reference material and results compared against a calibrated secondary source.
- "Displayed Reading" denotes the figure shown on item under calibration/ checking regardless of equipment precision or significant figures.
- The "Tolerance Limit" mentioned is the acceptance criteria applicable for similar equipment used by Quality Pro Test-Consult Ltd. or quoted from relevant international standards.

Appendix F. Cumulative Statistics on Exceedances, Environmental Complaints, Notification of Summons and Status of Prosecutions

Statistics for Exceedances for 1-hour TSP, Noise, Water, Waste, CWD Monitoring

| | | Total no. recorded in the reporting period | Total no. recorded since the project commenced |
|----------|--------|--|--|
| 1-hr TSP | Action | 0 | 0 |
| | Limit | 0 | 0 |
| Noise | Action | 0 | 0 |
| | Limit | 0 | 0 |
| Water | Action | 0 | 0 |
| | Limit | 0 | 0 |
| Waste | Action | 0 | 1 |
| | Limit | 0 | 0 |
| CWD | Action | 0 | 0 |
| | Limit | 0 | 0 |

Remark: Exceedances, which are not project related, are not shown in this table.

Statistics for Complaints, Notifications of Summons and Prosecutions

| Reporting Period | Cumulative Statistics | | |
|--|-----------------------|--------------------------|--------------|
| | Complaints | Notifications of Summons | Prosecutions |
| This reporting period | 3 | 0 | 0 |
| From 28 December 2015 to end of the reporting period | 55 | 2 | 2 |
