Follow-up on instantaneous speeding

Referring to the data of SkyPier HSF movements in October 2017, instantaneous speeding (i.e. a sudden change in speed at over 15 knots for a short period of time) within the SCZ was recorded from 12 HSF movements of which the duration of instantaneous speeding of 9 HSF movements were less than one minute, 2 HSF movement was less than two minutes and 1 HSF movement was less than 5 minutes. The AIS data and ferry operators' responses showed the cases were due to local strong water currents. The captain had reduced speed and maintained the speed at less than 15 knots after the incidents.

Three HSF movements with no AIS data and four HSFs with insufficient transmission of AIS data were received in October 2017. Vessel captain was also requested to provide the AIS plots to indicate the vessel entered the SCZ through the gate access point with no speeding in the SCZ.
